Sec 1

Directions for questions 1-4: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

The findings of trolleyology—complex, instinctive and worldwide moral intuitions—led Hauser and John Mikhail (a legal scholar) to revive an analogy from the philosopher John Rawls between the moral sense and language. According to Noam Chomsky, we are born with a "universal grammar" that forces us to analyse speech in terms of its grammatical structure, with no conscious awareness of the rules in play. By analogy, we are born with a universal moral grammar that forces us to analyse human action in terms of its moral structure, with just as little awareness.

The idea that the moral sense is an innate part of human nature is not far-fetched. A list of human universals collected by the anthropologist Donald E. Brown includes many moral concepts and emotions, including a distinction between right and wrong; empathy; fairness; admiration of generosity; rights and obligations; proscription of murder, rape and other forms of violence; redress of wrongs; sanctions for wrongs against the community; shame; and taboos. . . .

Though no one has identified genes for morality, there is circumstantial evidence they exist. The character traits called "conscientiousness" and "agreeableness" are far more correlated in identical twins separated at birth (who share their genes but not their environment) than in adoptive siblings raised together (who share their environment but not their genes). People given diagnoses of "antisocial personality disorder" or "psychopathy" show signs of morality blindness from the time they are children. They bully younger children, torture animals, habitually lie and seem incapable of empathy or remorse, often despite normal family backgrounds. Some of these children grow up into monsters who bilk elderly people out of their savings, . . or shoot convenience-store clerks lying on the floor during a robbery.

Though psychopathy probably comes from a genetic predisposition, a milder version can be caused by damage to frontal regions of the brain (including the areas that inhibit intact people from throwing the hypothetical fat man off the bridge). The neuroscientists Hanna and Antonio Damasio and their colleagues found that some children who sustained severe injuries to their frontal lobes can grow up into callous and irresponsible adults, despite normal intelligence. They lie, steal, ignore punishment, endanger their own children and can't think through even the simplest moral dilemmas, like what two people should do if they disagreed on which TV channel to watch or whether a man ought to steal a drug to save his dying wife.

The moral sense, then, may be rooted in the design of the normal human brain. Yet for all the awe that may fill our minds when we reflect on an innate moral law within, the idea is at best incomplete. . . . Of course, languages vary, too. In Chomsky's theory, languages conform to an abstract blueprint, like having phrases built out of verbs and objects, while the details vary, like whether the verb or the object comes first. Could we be wired with an abstract spec sheet that embraces all the strange ideas that people in different cultures moralise?

Q.1 [12047429]

Each of the following is a similarity between universal grammar and universal moral grammar EXCEPT:

1 ○ they both are not acquired characteristics.

2 ○ they both can have variations.

3 ○ they both have genetic predispositions.

4 ○ they both have unconscious processing.

Answer key/Solution

Solution:
Correct Answer : 3
Your Answer : 1
Correct Answer – (3)

Passage Summary

The author begins by discussing trolleyology and the analogy by Hauser and John Mikhail, suggesting that, like language, we have a universal moral grammar. They reference Donald E. Brown's list of human universals to support the idea of an innate moral sense.

They then discuss the absence of identified genes for morality but provide evidence of a genetic component, highlighting correlations in identical twins and the presence of "morality blindness" in those with antisocial personality disorder or psychopathy. Examples of such traits include bullying, lying, and lack of empathy.

Next, the author examines the impact of brain damage on moral judgment, citing neuroscientists Hanna and Antonio Damasio's findings that injuries to the frontal lobes can impair moral reasoning.

The author concludes by acknowledging the variability of moral norms across cultures, suggesting that our moral sense might follow an abstract moral blueprint similar to language, which allows for diverse moral beliefs within a universal structure.

Question Explanation

Each of the following is a similarity between universal grammar and universal moral grammar EXCEPT:
The question asks us to identify which statement does not describe a similarity between universal grammar and universal moral grammar. To answer this, we need to closely analyse the characteristics of both concepts as presented in the passage and identify the exception among the given options.

Correct Answer Explanation

(3) they both have genetic predispositions.
The passage discusses universal grammar, referring to Noam Chomsky's theory that humans are born with an innate ability to analyse speech according to grammatical structure. This implies an innate capacity, but the passage does not explicitly mention a genetic predisposition for universal grammar. On the other hand, the passage discusses the possibility of genetic influences on moral sense by mentioning circumstantial evidence and genetic predispositions for traits related to morality, such as conscientiousness and agreeableness. However, it clearly states that no one has identified specific genes for morality. Therefore, while there is speculation about genetic influences on moral sense, the passage does not confirm this as a definitive similarity.

Incorrect Answer Explanations

(1) they both are not acquired characteristics.
The passage makes it clear that both universal grammar and universal moral grammar are innate, not acquired characteristics. According to Chomsky, the ability to understand and produce language is inborn, and similarly, the moral sense is suggested to be an inherent part of human nature. This aligns with the statement that they are not acquired characteristics.

(2) they both can have variations.
The passage notes that while universal grammar provides an abstract blueprint for languages, the specific

details, such as word order, can vary between languages. Similarly, it suggests that while there may be universal moral principles, different cultures may express and prioritise these principles differently. This indicates that both universal grammar and universal moral grammar can exhibit variations, making this a valid similarity.

(4) they both have unconscious processing.
The passage describes how both the analysis of grammatical structure (universal grammar) and the analysis of human actions (universal moral grammar) occur without conscious awareness of the underlying rules. This unconscious processing is a key similarity mentioned in the analogy, indicating that both processes operate beneath the level of conscious thought.

Passage Summary

The author begins by discussing trolleyology and the analogy by Hauser and John Mikhail, suggesting that, like language, we have a universal moral grammar. They reference Donald E. Brown's list of human universals to support the idea of an innate moral sense.

They then discuss the absence of identified genes for morality but provide evidence of a genetic component, highlighting correlations in identical twins and the presence of "morality blindness" in those with antisocial personality disorder or psychopathy. Examples of such traits include bullying, lying, and lack of empathy.

Next, the author examines the impact of brain damage on moral judgment, citing neuroscientists Hanna and Antonio Damasio's findings that injuries to the frontal lobes can impair moral reasoning.

The author concludes by acknowledging the variability of moral norms across cultures, suggesting that our moral sense might follow an abstract moral blueprint similar to language, which allows for diverse moral beliefs within a universal structure.

Question Explanation

“Could we be wired with an abstract spec sheet that embraces all the strange ideas that people in different cultures moralise?” Which one of the following is the best interpretation of this question posed by the author?
The question asks us to interpret the author's rhetorical question: "Could we be wired with an abstract spec sheet that embraces all the strange ideas that people in different cultures moralise?" To answer this, we need to understand the context in which this question is posed and what the author is trying to convey about the relationship between universal morality and cultural diversity in moral beliefs.

Correct Answer Explanation
(2) The author is suggesting that there might be a universal framework for morality that accommodates diverse cultural norms.
In the passage, the author draws an analogy between universal grammar and universal moral grammar, suggesting that just as humans might have an innate grammatical structure that allows for linguistic diversity, there might also be an innate moral framework that accommodates moral diversity. The rhetorical question is a speculative inquiry into whether humans have a built-in, abstract moral template ("abstract spec sheet") that can encompass the various moral norms seen across different cultures. The phrase "embraces all the strange ideas that people in different cultures moralise" indicates an openness to the idea that while specific moral practices and beliefs vary widely, they could all be underpinned by a universal moral grammar.

Incorrect Answer Explanations

(1) The author is questioning the extent to which human beings may genuinely comprehend the moral beliefs of other cultures.
This option misinterprets the question as being about understanding other cultures' moral beliefs. However, the author's question is not about the ability to comprehend these beliefs but rather about whether there is a universal moral structure that underlies them. The focus is on the existence of an innate

framework, not on comprehension.

(3) The author is sceptical about whether abstract morality can embrace diverse views given its dependence on the culture.
This option suggests scepticism about the ability of an abstract moral framework to include diverse views. However, the author's rhetorical question is more exploratory, considering the possibility of a universal moral framework that naturally accommodates diverse moral norms. The tone of the question is speculative rather than sceptical.

(4) The author is proposing that cultural moral differences are superficial and not rooted in a universal moral grammar.
This option incorrectly suggests that the author believes cultural moral differences are superficial. In contrast, the rhetorical question implies that while these differences are significant, they may still be rooted in a universal moral framework. The author is not dismissing the differences but is contemplating a common underlying structure that could explain them.

Directions for questions 1-4: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

The findings of trolleyology—complex, instinctive and worldwide moral intuitions—led Hauser and John Mikhail (a legal scholar) to revive an analogy from the philosopher John Rawls between the moral sense and language. According to Noam Chomsky, we are born with a "universal grammar" that forces us to analyse speech in terms of its grammatical structure, with no conscious awareness of the rules in play. By analogy, we are born with a universal moral grammar that forces us to analyse human action in terms of its moral structure, with just as little awareness.

The idea that the moral sense is an innate part of human nature is not far-fetched. A list of human universals collected by the anthropologist Donald E. Brown includes many moral concepts and emotions, including a distinction between right and wrong; empathy; fairness; admiration of generosity; rights and obligations; proscription of murder, rape and other forms of violence; redress of wrongs; sanctions for wrongs against the community; shame; and taboos. . . .

Though no one has identified genes for morality, there is circumstantial evidence they exist. The character traits called "conscientiousness" and "agreeableness" are far more correlated in identical twins separated at birth (who share their genes but not their environment) than in adoptive siblings raised together (who share their environment but not their genes). People given diagnoses of "antisocial personality disorder" or "psychopathy" show signs of morality blindness from the time they are children. They bully younger children, torture animals, habitually lie and seem incapable of empathy or remorse, often despite normal family backgrounds. Some of these children grow up into monsters who bilk elderly people out of their savings, . . or shoot convenience-store clerks lying on the floor during a robbery.

Though psychopathy probably comes from a genetic predisposition, a milder version can be caused by damage to frontal regions of the brain (including the areas that inhibit intact people from throwing the hypothetical fat man off the bridge). The neuroscientists Hanna and Antonio Damasio and their colleagues found that some children who sustained severe injuries to their frontal lobes can grow up into callous and irresponsible adults, despite normal intelligence. They lie, steal, ignore punishment, endanger their own children and can't think through even the simplest moral dilemmas, like what two people should do if they disagreed on which TV channel to watch or whether a man ought to steal a drug to save his dying wife.

The moral sense, then, may be rooted in the design of the normal human brain. Yet for all the awe that may fill our minds when we reflect on an innate moral law within, the idea is at best incomplete. . . . Of course, languages vary, too. In Chomsky's theory, languages conform to an abstract blueprint, like having phrases built out of verbs and objects, while the details vary, like whether the verb or the object comes first. Could we be wired with an abstract spec sheet that embraces all the strange ideas that people in different cultures moralise?

Q.3 [12047429]

The author compares identical twins separated at birth and adoptive siblings raised together to argue that:

1 ○ genetic factors may have an influence on traits related to morality.

2 ○ "conscientiousness" and "agreeableness" can be called moral genes.

3 ○ the characteristics of personality disorders are related to morality.

4 ○ environmental factors privilege genetic factors in character traits.

✔

Answer key/Solution

Solution:
Correct Answer : 1
Your Answer : 1
Correct Answer – (1)

Question Explanation

The author compares identical twins separated at birth and adoptive siblings raised together to argue that:
The question asks us to interpret why the author compares identical twins separated at birth and adoptive siblings raised together. We need to understand the context in which this comparison is made and how it supports the author's argument about the influence of genetics and environment on traits related to morality.

Correct Answer Explanation

(1) genetic factors may have an influence on traits related to morality.
In the passage, the author discusses the correlation between traits like "conscientiousness" and "agreeableness" in identical twins separated at birth compared to adoptive siblings raised together. The higher correlation in identical twins, who share the same genes but not the same environment, suggests that genetic factors play a significant role in these traits. The author uses this comparison to support the idea that genetic factors may influence traits related to morality, even though specific genes for morality have not been identified.

Incorrect Answer Explanations

(2) “conscientiousness” and “agreeableness” can be called moral genes.
This option misinterprets the passage. The author does not claim that "conscientiousness" and "agreeableness" are moral genes. Instead, these traits are used to illustrate how genetic factors might influence personality traits related to morality, but they are not labelled as moral genes themselves.

(3) the characteristics of personality disorders are related to morality.
While the passage does discuss personality disorders and their impact on morality, this comparison of identical twins and adoptive siblings is not made to illustrate the relationship between personality disorders and morality. The focus of this comparison is on genetic influences on moral traits, not on the characteristics of personality disorders.

(4) environmental factors privilege genetic factors in character traits.
This option suggests that environmental factors are more important than genetic factors, which is the opposite of what the author is arguing. The comparison between identical twins and adoptive siblings is used to highlight the significant influence of genetics over the environment in the development of traits related to morality.

Solution:
Correct Answer : 4
Your Answer : 2
Correct Answer – (4)

Passage Summary

The author begins by discussing trolleyology and the analogy by Hauser and John Mikhail, suggesting that, like language, we have a universal moral grammar. They reference Donald E. Brown's list of human universals to support the idea of an innate moral sense.

They then discuss the absence of identified genes for morality but provide evidence of a genetic component, highlighting correlations in identical twins and the presence of "morality blindness" in those with antisocial personality disorder or psychopathy. Examples of such traits include bullying, lying, and lack of empathy.

Next, the author examines the impact of brain damage on moral judgment, citing neuroscientists Hanna and Antonio Damasio's findings that injuries to the frontal lobes can impair moral reasoning.

The author concludes by acknowledging the variability of moral norms across cultures, suggesting that our moral sense might follow an abstract moral blueprint similar to language, which allows for diverse moral beliefs within a universal structure.

Question Explanation

The author would likely agree with all the following statements EXCEPT:
The question asks us to identify which statement the author would not agree with, based on the passage. To answer this, we need to analyse the author's viewpoints on psychopathy, moral dilemmas, the brain's design, and the relationship between morality and moral beliefs and practices, as presented in the text.

Correct Answer Explanation

(4) morality is detached from moral beliefs and practices.
The passage suggests that the author believes morality is deeply connected to moral beliefs and practices. The discussion revolves around the idea that humans have an innate moral sense, which manifests in various moral beliefs and practices across different cultures. This innate moral sense, or universal moral grammar, provides the foundation for diverse cultural expressions of morality. Therefore, the author would disagree with the statement that morality is detached from moral beliefs and practices, as it contradicts the core argument presented in the passage.

Incorrect Answer Explanations

(1) psychopathy can arise not just from genetic predisposition.
The author would agree with this statement. The passage mentions that psychopathy can result from both genetic predispositions and brain damage, particularly to the frontal lobes. This indicates that psychopathy is influenced by multiple factors, not solely by genetics, aligning with the author's argument.

(2) studying moral dilemmas can provide insights into morality.
The author would agree with this statement. The passage discusses trolleyology and moral intuitions as a way to understand the underlying moral grammar that guides human behaviour. By analysing how people respond to moral dilemmas, researchers can gain insights into the innate moral sense and its variations across cultures.

(3) the moral sense is likely rooted in the brain's design.
The author would agree with this statement. The passage explicitly states that the moral sense may be rooted in the normal human brain's design, as evidenced by studies on psychopathy and brain injuries affecting moral judgment. This suggests a neurological basis for morality, supporting the idea that the brain's structure plays a crucial role in moral reasoning.

Directions for questions 5-8: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Jeffrey T. Nealon's. . .*Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism* sets itself a daunting task for its slim 227 pages: to assess our new-millennial present with tools from Fredric Jameson's now-classic essay "*Postmodernism, or the Cultural Logic of Late Capitalism*," first published. . .nearly 30 years ago. . . .

What does Nealon want from Jameson? Two big things. First, Jameson, as Nealon rightly argues, takes a dialectical, rather than a moralistic, approach to the nexus of culture and economy that he presents. Jameson does not lament the dominance of capitalism — though he does believe it's "late" and may yet come to an end, having established the preconditions for a more radically free and equal world than it could itself sustain. So Nealon takes Jameson as his authority for asserting that those of us concerned with the culture of the present must not merely decry but also analyse it, and see its energies and positive aspects. I couldn't agree more, but it's a hard lesson.

Second, Nealon takes from Jameson a methodological principle of "transcoding" or "overcoding." As he explains:
[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example. Or, to put it somewhat more precisely, one should be able to take the claims and effects that surround the logic of X or Y cultural phenomenon (say, that contemporary literature is open-ended, process-oriented, not dedicated to the limitations of univocal meaning) and dialectically overcode or transcode these cultural effects in terms of economic ones (that, say, global capitalism is open-ended, process-oriented, not dedicated to the limitations of univocal meaning).

Here is where things start to go wrong. Nealon's version of transcoding makes everything the same, relating elements as possessing similar properties (i.e., open-ended, process-oriented, not dedicated to univocal meaning, etc.), but Jameson's famous formula in his postmodernism book is that "difference relates." Nealon seeks the sameness of "homology," but there are many other different kinds of relationships and the thinkers Nealon cites most often have excelled in specifying varieties of nonhomology.

Nealon thus uses the very same terms to characterise both culture and the economy, and he claims it's the task of critical thinking to do just this. Sometimes it works. This homological imperative makes for a stirring chapter on the university, considered as an economic entity. He points out that contemporary corporate management aims for flat organisation, eliminating bureaucratic intermediaries; in contrast, universities over the last 40 years have added mid-level administrators much more rapidly than professors. Nealon thus proposes that we "unlock shareholder value" by "trimming and streamlining the administrative ranks […] and disgorging that excess cash back into the 'core business' of teaching and research, thereby turning the university back to the people who bear the real brunt of its success or failure: the faculty and the students." I agree; I just wish he also acknowledged that much of the administrative growth has come directly in the service of the two major groups that pay for American higher education: governments and parents.

Q.5 [12047429]
Which of the following views of Nealon does the author consider problematic?

1 ○ Rather than just criticising, we should explore the dynamics of current economic conditions.

2 ○ Cultural and economic phenomena should be understood as possessing similar properties.

3 ○ The administrative expansion in universities serves the needs of governments and parents.

4 ○ The prevailing cultural conditions can be understood under the framework of nonhomology.

Solution:
Correct Answer : 2
Correct Answer – (2)

Answer key/Solution

Passage Summary

The author begins by introducing Jeffrey T. Nealon's book, "Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism," and its aim to apply Fredric Jameson's ideas to the present.

They then explain Nealon's two main takeaways from Jameson: first, a dialectical approach to culture and economy, emphasising analysis over lamentation; and second, the methodological principle of "transcoding" or "overcoding," where cultural and economic phenomena are related by shared properties.

Next, the author discusses where Nealon's approach falters. Nealon equates cultural and economic elements based on similar properties, diverging from Jameson's idea that "difference relates." This method of seeking sameness sometimes succeeds, as illustrated in Nealon's critique of university administration growth.

The author highlights Nealon's argument that universities should streamline administration and reinvest in teaching and research to benefit faculty and students. However, they note Nealon's oversight of administrative growth being driven by the demands of governments and parents.

Question Explanation

Which of the following views of Nealon does the author consider problematic?
The question asks which of Nealon's views the author finds problematic. To answer this, we need to understand Nealon's key points as presented in the passage and identify the specific view that the author critiques. The passage discusses Nealon's adoption of Jameson's dialectical approach, his methodological principle of transcoding, and his analysis of university administration.

Correct Answer Explanation

Option 2: Cultural and economic phenomena should be understood as possessing similar properties.
The author critiques Nealon's method of transcoding, which equates cultural and economic phenomena by identifying them as having similar properties (e.g., both being open-ended and process-oriented). The passage points out that Nealon's approach of "homology"—seeking sameness between different domains—is problematic because Jameson's principle, which Nealon claims to follow, involves recognising differences and relational dynamics rather than mere sameness. The author explicitly states, "Nealon seeks the sameness of 'homology,' but there are many other different kinds of relationships." This indicates that the author finds Nealon's focus on similarity between cultural and economic phenomena to be an oversimplification, thus making Option 2 the correct answer.

Incorrect Answer Explanations

Option 1: Rather than just criticising, we should explore the dynamics of current economic conditions.
This view aligns with Nealon's and Jameson's dialectical approach, which the author supports. The passage notes, "Nealon rightly argues [Jameson] takes a dialectical...approach," and the author agrees with this, stating, "I couldn't agree more." Therefore, this view is not considered problematic by the author.

Option 3: The administrative expansion in universities serves the needs of governments and parents.
This view is actually the author's perspective, not Nealon's. The author critiques Nealon's analysis of

university administration, acknowledging its merit but also pointing out that Nealon fails to recognise the role of governments and parents in driving administrative growth. The passage states, "I just wish he also acknowledged that much of the administrative growth has come directly in the service of the two major groups that pay for American higher education: governments and parents." Since this view is the author's, it cannot be the correct answer to the question asking about Nealon's views.

Option 4: The prevailing cultural conditions can be understood under the framework of nonhomology. This view represents the author's perspective, suggesting that relationships other than homology should be considered. The author argues for recognising "varieties of nonhomology," which Nealon overlooks by focusing on sameness. Since this option does not represent Nealon's view but rather the author's critique of Nealon, it is not the correct answer.

Directions for questions 5-8: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Jeffrey T. Nealon's. . .*Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism* sets itself a daunting task for its slim 227 pages: to assess our new-millennial present with tools from Fredric Jameson's now-classic essay "*Postmodernism, or the Cultural Logic of Late Capitalism*," first published. . .nearly 30 years ago. . . .

What does Nealon want from Jameson? Two big things. First, Jameson, as Nealon rightly argues, takes a dialectical, rather than a moralistic, approach to the nexus of culture and economy that he presents. Jameson does not lament the dominance of capitalism — though he does believe it's "late" and may yet come to an end, having established the preconditions for a more radically free and equal world than it could itself sustain. So Nealon takes Jameson as his authority for asserting that those of us concerned with the culture of the present must not merely decry but also analyse it, and see its energies and positive aspects. I couldn't agree more, but it's a hard lesson.

Second, Nealon takes from Jameson a methodological principle of "transcoding" or "overcoding." As he explains:
[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example. Or, to put it somewhat more precisely, one should be able to take the claims and effects that surround the logic of X or Y cultural phenomenon (say, that contemporary literature is open-ended, process-oriented, not dedicated to the limitations of univocal meaning) and dialectically overcode or transcode these cultural effects in terms of economic ones (that, say, global capitalism is open-ended, process-oriented, not dedicated to the limitations of univocal meaning).

Here is where things start to go wrong. Nealon's version of transcoding makes everything the same, relating elements as possessing similar properties (i.e., open-ended, process-oriented, not dedicated to univocal meaning, etc.), but Jameson's famous formula in his postmodernism book is that "difference relates." Nealon seeks the sameness of "homology," but there are many other different kinds of relationships and the thinkers Nealon cites most often have excelled in specifying varieties of nonhomology.

Nealon thus uses the very same terms to characterise both culture and the economy, and he claims it's the task of critical thinking to do just this. Sometimes it works. This homological imperative makes for a stirring chapter on the university, considered as an economic entity. He points out that contemporary corporate management aims for flat organisation, eliminating bureaucratic intermediaries; in contrast, universities over the last 40 years have added mid-level administrators much more rapidly than professors. Nealon thus proposes that we "unlock shareholder value" by "trimming and streamlining the administrative ranks […] and disgorging that excess cash back into the 'core business' of teaching and research, thereby turning the university back to the people who bear the real brunt of its success or failure: the faculty and the students." I agree; I just wish he also acknowledged that much of the administrative growth has come directly in the service of the two major groups that pay for American higher education: governments and parents.

Q.6 [12047429]

"[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example." Which one of the following is the best interpretation of this sentence?

1 ◯ Seemingly unrelated things must be connected if viewed on an equal level.

2 ○ Things that exist in the world do seem to have a common connection.

3 ○ The various realms of the world fundamentally have a common root.

4 ○ If there are connections between unrelated things, then they manifest in different realms.

Solution:
Correct Answer : 1
Correct Answer – (1)

Answer key/Solution

Passage Summary

The author begins by introducing Jeffrey T. Nealon's book, "Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism," and its aim to apply Fredric Jameson's ideas to the present.

They then explain Nealon's two main takeaways from Jameson: first, a dialectical approach to culture and economy, emphasising analysis over lamentation; and second, the methodological principle of "transcoding" or "overcoding," where cultural and economic phenomena are related by shared properties.

Next, the author discusses where Nealon's approach falters. Nealon equates cultural and economic elements based on similar properties, diverging from Jameson's idea that "difference relates." This method of seeking sameness sometimes succeeds, as illustrated in Nealon's critique of university administration growth.

The author highlights Nealon's argument that universities should streamline administration and reinvest in teaching and research to benefit faculty and students. However, they note Nealon's oversight of administrative growth being driven by the demands of governments and parents.

Question Explanation

"[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example." Which one of the following is the best interpretation of this sentence?
The question asks for the best interpretation of a specific sentence from the passage. The sentence suggests that if all aspects of the world are considered on an equal footing, then connections between seemingly unrelated elements must exist. We need to determine which option best captures this idea.

Correct Answer Explanation

Option 1: Seemingly unrelated things must be connected if viewed on an equal level.
This option accurately captures the essence of the sentence. The sentence argues that if everything exists on the "same flat plane," then disparate elements, such as the cultural and economic realms or avant-garde poetry and skyscrapers, must be connected in some way. By viewing these elements on an equal level, their connections become apparent. This is the best interpretation of the sentence because it directly addresses the idea of finding relationships between seemingly unrelated things by placing them on the same level.

Incorrect Answer Explanations

Option 2: Things that exist in the world do seem to have a common connection.
This option implies that connections between things are apparent or obvious, which is not what the original sentence suggests. The original sentence emphasises that connections must be found when considering everything on the same level, not that they are inherently obvious. Thus, this option oversimplifies the idea presented.

Option 3: The various realms of the world fundamentally have a common root.

This option suggests a fundamental, intrinsic commonality among all things, which is not the same as the idea of finding connections by viewing things on the same plane. The original sentence does not imply that all realms have a common root but rather that they can be related when analysed equally.

Option 4: If there are connections between unrelated things, then they manifest in different realms.
This option misinterprets the sentence by suggesting that connections, if they exist, appear in different realms. The original sentence focuses on finding connections between elements when they are considered on the same flat plane, not that connections appear across different realms. This interpretation diverges from the idea of equal analysis, leading to finding relationships.

Directions for questions 5-8: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Jeffrey T. Nealon's. . .*Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism* sets itself a daunting task for its slim 227 pages: to assess our new-millennial present with tools from Fredric Jameson's now-classic essay "*Postmodernism, or the Cultural Logic of Late Capitalism*," first published. . .nearly 30 years ago. . . .

What does Nealon want from Jameson? Two big things. First, Jameson, as Nealon rightly argues, takes a dialectical, rather than a moralistic, approach to the nexus of culture and economy that he presents. Jameson does not lament the dominance of capitalism — though he does believe it's "late" and may yet come to an end, having established the preconditions for a more radically free and equal world than it could itself sustain. So Nealon takes Jameson as his authority for asserting that those of us concerned with the culture of the present must not merely decry but also analyse it, and see its energies and positive aspects. I couldn't agree more, but it's a hard lesson.

Second, Nealon takes from Jameson a methodological principle of "transcoding" or "overcoding." As he explains:
[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example. Or, to put it somewhat more precisely, one should be able to take the claims and effects that surround the logic of X or Y cultural phenomenon (say, that contemporary literature is open-ended, process-oriented, not dedicated to the limitations of univocal meaning) and dialectically overcode or transcode these cultural effects in terms of economic ones (that, say, global capitalism is open-ended, process-oriented, not dedicated to the limitations of univocal meaning).

Here is where things start to go wrong. Nealon's version of transcoding makes everything the same, relating elements as possessing similar properties (i.e., open-ended, process-oriented, not dedicated to univocal meaning, etc.), but Jameson's famous formula in his postmodernism book is that "difference relates." Nealon seeks the sameness of "homology," but there are many other different kinds of relationships and the thinkers Nealon cites most often have excelled in specifying varieties of nonhomology.

Nealon thus uses the very same terms to characterise both culture and the economy, and he claims it's the task of critical thinking to do just this. Sometimes it works. This homological imperative makes for a stirring chapter on the university, considered as an economic entity. He points out that contemporary corporate management aims for flat organisation, eliminating bureaucratic intermediaries; in contrast, universities over the last 40 years have added mid-level administrators much more rapidly than professors. Nealon thus proposes that we "unlock shareholder value" by "trimming and streamlining the administrative ranks […] and disgorging that excess cash back into the 'core business' of teaching and research, thereby turning the university back to the people who bear the real brunt of its success or failure: the faculty and the students." I agree; I just wish he also acknowledged that much of the administrative growth has come directly in the service of the two major groups that pay for American higher education: governments and parents.

Q.7 [12047429]
Which of the following best expresses the main point of the last paragraph?

1 ○ Nealon rightly criticises contemporary university management for adding mid-level administrators more rapidly than professors.

2 ○ Nealon proposes that universities should streamline administration and reinvest in teaching and research; however, this view is deeply flawed.

3 ○ Nealon's view on university economics is compelling but overlooks that administrative growth is driven by government and parents.

4 ○ Nealon’s assertion that corporate management trends and university administrative growth are different overlooks the homological factors.

Passage Summary

The author begins by introducing Jeffrey T. Nealon's book, "Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism," and its aim to apply Fredric Jameson's ideas to the present.

They then explain Nealon's two main takeaways from Jameson: first, a dialectical approach to culture and economy, emphasising analysis over lamentation; and second, the methodological principle of "transcoding" or "overcoding," where cultural and economic phenomena are related by shared properties.

Next, the author discusses where Nealon's approach falters. Nealon equates cultural and economic elements based on similar properties, diverging from Jameson's idea that "difference relates." This method of seeking sameness sometimes succeeds, as illustrated in Nealon's critique of university administration growth.

The author highlights Nealon's argument that universities should streamline administration and reinvest in teaching and research to benefit faculty and students. However, they note Nealon's oversight of administrative growth being driven by the demands of governments and parents.

Question Explanation

Which of the following best expresses the main point of the last paragraph?
The question asks which option best expresses the main point of the last paragraph. To answer this, we need to understand the main ideas conveyed in that paragraph, focusing on Nealon's critique of university management and the author's evaluation of his argument.

Correct Answer Explanation

Option 3: Nealon's view on university economics is compelling but overlooks that administrative growth is driven by government and parents.
This option captures the essence of the last paragraph accurately. The author acknowledges that Nealon makes a valid point about the overexpansion of mid-level administrators in universities and proposes a solution to streamline administration and reinvest in teaching and research. However, the author critiques Nealon for failing to recognise that the growth in administration is also driven by the demands of governments and parents. This dual recognition of Nealon's valid critique and his oversight is the main point of the last paragraph.

Incorrect Answer Explanations

Option 1: Nealon rightly criticises contemporary university management for adding mid-level administrators more rapidly than professors.
This option is partly correct but incomplete. While it is true that Nealon criticises the rapid addition of mid-level administrators, the main point of the last paragraph also includes the author's critique that Nealon overlooks the reasons behind this growth. Therefore, this option does not fully express the main point of the paragraph.

Option 2: Nealon proposes that universities should streamline administration and reinvest in teaching and research; however, this view is deeply flawed.

This option misrepresents the author's stance. The author does not suggest that Nealon's view is deeply flawed but rather points out a specific oversight regarding the reasons for administrative growth. The author's critique is more nuanced, recognising the validity of Nealon's proposal while pointing out the incomplete analysis of the underlying causes.

Option 4: Nealon's assertion that corporate management trends and university administrative growth are different overlooks the homological factors.
This option misinterprets the paragraph. Nealon actually draws a parallel (homology) between corporate management trends and university administrative growth, suggesting they should both streamline. The author does not criticise this parallel but rather points out that Nealon overlooks the reasons for administrative expansion in universities.

Directions for questions 5-8: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Jeffrey T. Nealon's. . .*Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism* sets itself a daunting task for its slim 227 pages: to assess our new-millennial present with tools from Fredric Jameson's now-classic essay "*Postmodernism, or the Cultural Logic of Late Capitalism*," first published. . .nearly 30 years ago. . . .

What does Nealon want from Jameson? Two big things. First, Jameson, as Nealon rightly argues, takes a dialectical, rather than a moralistic, approach to the nexus of culture and economy that he presents. Jameson does not lament the dominance of capitalism — though he does believe it's "late" and may yet come to an end, having established the preconditions for a more radically free and equal world than it could itself sustain. So Nealon takes Jameson as his authority for asserting that those of us concerned with the culture of the present must not merely decry but also analyse it, and see its energies and positive aspects. I couldn't agree more, but it's a hard lesson.

Second, Nealon takes from Jameson a methodological principle of "transcoding" or "overcoding." As he explains:
[I]f everything in our world exists on the same flat plane, then things that don't at first seem to have much in common quite literally have to be related in some way(s) — the cultural realm and the economic realm, avant-garde poetry and downtown skyscrapers, for example. Or, to put it somewhat more precisely, one should be able to take the claims and effects that surround the logic of X or Y cultural phenomenon (say, that contemporary literature is open-ended, process-oriented, not dedicated to the limitations of univocal meaning) and dialectically overcode or transcode these cultural effects in terms of economic ones (that, say, global capitalism is open-ended, process-oriented, not dedicated to the limitations of univocal meaning).

Here is where things start to go wrong. Nealon's version of transcoding makes everything the same, relating elements as possessing similar properties (i.e., open-ended, process-oriented, not dedicated to univocal meaning, etc.), but Jameson's famous formula in his postmodernism book is that "difference relates." Nealon seeks the sameness of "homology," but there are many other different kinds of relationships and the thinkers Nealon cites most often have excelled in specifying varieties of nonhomology.

Nealon thus uses the very same terms to characterise both culture and the economy, and he claims it's the task of critical thinking to do just this. Sometimes it works. This homological imperative makes for a stirring chapter on the university, considered as an economic entity. He points out that contemporary corporate management aims for flat organisation, eliminating bureaucratic intermediaries; in contrast, universities over the last 40 years have added mid-level administrators much more rapidly than professors. Nealon thus proposes that we "unlock shareholder value" by "trimming and streamlining the administrative ranks […] and disgorging that excess cash back into the 'core business' of teaching and research, thereby turning the university back to the people who bear the real brunt of its success or failure: the faculty and the students." I agree; I just wish he also acknowledged that much of the administrative growth has come directly in the service of the two major groups that pay for American higher education: governments and parents.

Q.8 [12047429]
What is the main difference between Nealon's and Jameson's approaches to the relationship between culture and economy?

1 ○ Nealon applies a moralistic lens, while Jameson uses a dialectical method.

2 ○ Nealon focuses on similarities, while Jameson emphasises relational differences.

3 ○ Nealon ignores economic factors, whereas Jameson integrates them into cultural analysis.

4 ○ Nealon examines historical contexts, while Jameson looks at contemporary issues.

Solution:
Correct Answer : 2
Correct Answer – (2)

Answer key/Solution

Passage Summary

The author begins by introducing Jeffrey T. Nealon's book, "Post-Postmodernism: or, The Cultural Logic of Just-in-Time Capitalism," and its aim to apply Fredric Jameson's ideas to the present.

They then explain Nealon's two main takeaways from Jameson: first, a dialectical approach to culture and economy, emphasising analysis over lamentation; and second, the methodological principle of "transcoding" or "overcoding," where cultural and economic phenomena are related by shared properties.

Next, the author discusses where Nealon's approach falters. Nealon equates cultural and economic elements based on similar properties, diverging from Jameson's idea that "difference relates." This method of seeking sameness sometimes succeeds, as illustrated in Nealon's critique of university administration growth.

The author highlights Nealon's argument that universities should streamline administration and reinvest in teaching and research to benefit faculty and students. However, they note Nealon's oversight of administrative growth being driven by the demands of governments and parents.

Question Explanation

What is the main difference between Nealon's and Jameson's approaches to the relationship between culture and economy?
The question asks for the main difference between Nealon's and Jameson's approaches to the relationship between culture and economy. To answer this, we need to understand how each theorist approaches the analysis of culture and economy as described in the passage.

Correct Answer Explanation

Option 2: Nealon focuses on similarities, while Jameson emphasises relational differences.
The passage clearly states that Nealon's approach to transcoding tends to make everything seem the same by highlighting similar properties between cultural and economic phenomena. In contrast, Jameson's approach is described as emphasising that "difference relates," meaning he focuses on how different elements are related through their differences rather than their similarities. The author critiques Nealon for seeking "the sameness of 'homology'" instead of exploring the variety of relationships that Jameson's method would uncover. This distinction between focusing on similarities versus relational differences is the main difference between Nealon's and Jameson's approaches.

Incorrect Answer Explanations

Option 1: Nealon applies a moralistic lens, while Jameson uses a dialectical method.
This option is incorrect because the passage explicitly states that Nealon, like Jameson, does not take a moralistic approach. It mentions that "Nealon rightly argues" that Jameson "takes a dialectical, rather than a moralistic, approach," and Nealon follows this dialectical method as well. Therefore, this option does not accurately reflect the main difference between their approaches.

Option 3: Nealon ignores economic factors, whereas Jameson integrates them into cultural analysis.
This option is inaccurate as Nealon does consider economic factors in his analysis. The passage discusses

how Nealon applies economic principles to cultural phenomena, such as his analysis of university administration and corporate management. Thus, both Nealon and Jameson integrate economic factors into their cultural analyses.

Option 4: Nealon examines historical contexts, while Jameson looks at contemporary issues.
This option does not reflect the main difference between their approaches as described in the passage. Both theorists are concerned with the relationship between culture and economy in their respective contexts. The passage does not indicate that one focuses on historical contexts while the other focuses on contemporary issues.

Directions for questions 9-12: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Laboratory mice are very little help, [Dr. Steven Austad] thinks, in understanding ageing in animals that have not gone through decades of inbreeding and which live in environments that offer more danger than that inflicted in experiments. Lab mice, he feels, are not just a poor guide to the wider world of animal ageing; they are barely even mice any more. They are, in a phrase coined by one of his colleagues, just “mouse-like objects”. . . .

In early work on American opossums, he observed that those living on an island off the coast of Georgia, where there were no predators, seemed to age less rapidly than those on the mainland. This caused him to be sceptical about how much could be learned from inbred animals leading cushy lives (lab mice tend to live many times longer than their wild relatives). Instead, he seeks to study longevity in wild animals.

With a maximum recorded lifespan of just over 120 years, human beings are at the upper end of the animal longevity scale. But there are a few that outdo them. At an estimated 200 years, bowhead whales are thought to be the longest-living mammals. . . . In-depth studies of bowhead whales and Greenland sharks obviously pose difficulties. Long-lived invertebrates may not have as much to say about people as one might wish. And working with true methuselahs, backboned or not, might mean working on their timescales, which would hardly be helpful.

As a compromise between longevity and fecundity, Dr Austad proposes the house sparrow. In general, animal lifespans increase with size. But whereas wild mice live three or four months wild sparrows, similar in weight, can live almost 20 years. Understanding the physiological differences that grant these birds such long lives might, he reckons, lead to useful ideas for increasing the lifespans and healthspans of people, a species in which he is interested despite its basically domesticated nature.

Another off-kilter approach is to look at ageing not through the lens of animals that lead long lives in the wild but of animals that lead shorter lives in domesticity. Big breeds of dogs live less long than small ones; breeding them for size bred them for short lives, too. The mechanism by which that happened may be more tractable to study than most of those involved in ageing; selective breeding has changed relatively little of the dogs’ genome. And turning understanding thus gathered into a treatment would unleash a flood of dollars and love from people who own Great Danes, Newfoundlands and the like.

That is what Celine Halioua, the founder of Loyal, a San Francisco startup, wants to do. She knows which pathway she wants to target, and the company is getting a drug into trials. Animal trials are more easily done than human ones, and veterinary approval is far faster than medical approval. Ms Halioua’s hope is that by developing a life-lengthening supplement for big dogs, she can provide Loyal with a reliable revenue stream quite quickly. With that she can fund her long-term goal, the extension of human life. And it should help with her other heroic ambition—to found a drug company people actually like, even love.

Q.9 [12047429]

All of the following statements are supported by the information given in the passage EXCEPT:

1 ○ there is an interplay between scientific rigour and commercial viability in longevity research.

2 ○ studying larger, long-lived species may yield more practical insights into longevity.

3 ○ veterinary research can serve as a stepping stone for human medical advancements.

4 ○ there is a significant commercial interest in extending the lifespans of pets.

Answer key/Solution

Solution:
Correct Answer : 2
Your Answer : 2
Correct Answer – (2)

Passage Summary

The author begins by introducing Dr. Steven Austad's scepticism about using laboratory mice for ageing studies, noting that these inbred, sheltered animals offer little insight into natural ageing processes. Austad considers lab mice to be "mouse-like objects" rather than true representatives of their species.

They then describe Austad's early work with American opossums, where he observed that island opossums, free from predators, aged more slowly than mainland ones. This observation led him to prefer studying wild animals to understand longevity.

Next, the author discusses the challenge of studying long-lived animals like bowhead whales and Greenland sharks, noting the impracticality of working with such species. Austad proposes using house sparrows as a compromise, as they live much longer than similarly sized wild mice. He believes that understanding the physiological traits of sparrows could provide insights into extending human lifespans and healthspans.

The author then explores another unconventional approach: studying the shorter lifespans of large domestic dog breeds compared to smaller ones. This method might reveal mechanisms of ageing since selective breeding for size has minimally altered the dogs' genome. Insights gained here could lead to treatments that extend lifespan.

Finally, the author introduces Celine Halioua, founder of Loyal, a startup aiming to develop a life-lengthening supplement for large dogs. Halioua plans to leverage faster veterinary approvals to create a revenue stream for her ultimate goal of extending human life and establishing a beloved drug company.

Question Explanation:

All of the following statements are supported by the information given in the passage EXCEPT:
This question asks which statement is not supported by the information given in the passage. To determine this, we need to analyse each statement and see if it aligns with the details provided about longevity research in animals and its implications for both commercial interests and scientific understanding.

Correct Answer Explanation:

(2) studying larger, long-lived species may yield more practical insights into longevity.
This statement is not supported by the passage. The passage specifically mentions the difficulties associated with studying long-lived species such as bowhead whales and Greenland sharks, stating that "in-depth studies of bowhead whales and Greenland sharks obviously pose difficulties" and that "working with true methuselahs... might mean working on their timescales, which would hardly be helpful." These points indicate that studying larger, long-lived species is not seen as yielding practical insights due to the logistical challenges and extended timescales involved.

Incorrect Answer Explanations:

(1) there is an interplay between scientific rigour and commercial viability in longevity research.

This statement is supported by the passage. The passage discusses how scientific research into animal longevity often intersects with commercial interests. For example, it describes how Loyal, a startup, aims to develop a life-lengthening supplement for large dogs as a commercially viable product. This product could provide revenue to support further scientific research into human longevity. This indicates a clear interplay between maintaining scientific rigour in longevity research while pursuing commercial viability to fund and sustain that research.

(3) veterinary research can serve as a stepping stone for human medical advancements.
This statement is supported by the passage. It is explicitly mentioned that Celine Halioua's company, Loyal, is using veterinary research as a precursor to human medical advancements. The passage states that "animal trials are more easily done than human ones, and veterinary approval is far faster than medical approval," suggesting that veterinary research is a practical and expedient way to gather data and develop treatments that could later be applied to humans. This illustrates the role of veterinary research as a stepping stone towards advancements in human medicine.

(4) there is a significant commercial interest in extending the lifespans of pets.
This statement is supported by the passage. The passage highlights the substantial commercial interest in developing life-lengthening supplements for pets, especially large dog breeds. It notes the potential financial gains and the emotional investment from pet owners, saying that developing such treatments "would unleash a flood of dollars and love from people who own Great Danes, Newfoundlands and the like." This demonstrates the strong commercial motivation to extend the lifespans of pets, underscoring the significant interest in this market.

With that she can fund her long-term goal, the extension of human life. And it should help with her other heroic ambition—to found a drug company people actually like, even love.

Q.10 [12047429]

Each of the following, if true, would weaken the suggestions made by Dr. Austad EXCEPT:

1 ○ lab mice are the most popular model organisms in research, with a vast amount of existing literature and data available.

2 ○ genetic engineering now creates lab mice with diversity similar to wild populations, reducing inbreeding issues.

3 ○ comparative genomic studies have shown that key ageing-related genes in lab mice are highly similar to those in wild animals.

4 ○ house sparrows are highly mobile and are difficult to maintain in stable populations within controlled research settings.

✖

Answer key/Solution

Solution:
Correct Answer : 1
Your Answer : 4
Correct Answer – (1)

Passage Summary

The author begins by introducing Dr. Steven Austad's scepticism about using laboratory mice for ageing studies, noting that these inbred, sheltered animals offer little insight into natural ageing processes. Austad considers lab mice to be "mouse-like objects" rather than true representatives of their species.

They then describe Austad's early work with American opossums, where he observed that island opossums, free from predators, aged more slowly than mainland ones. This observation led him to prefer studying wild animals to understand longevity.

Next, the author discusses the challenge of studying long-lived animals like bowhead whales and Greenland sharks, noting the impracticality of working with such species. Austad proposes using house sparrows as a compromise, as they live much longer than similarly sized wild mice. He believes that understanding the physiological traits of sparrows could provide insights into extending human lifespans and healthspans.

The author then explores another unconventional approach: studying the shorter lifespans of large domestic dog breeds compared to smaller ones. This method might reveal mechanisms of ageing since selective breeding for size has minimally altered the dogs' genome. Insights gained here could lead to treatments that extend lifespan.

Finally, the author introduces Celine Halioua, founder of Loyal, a startup aiming to develop a life-lengthening supplement for large dogs. Halioua plans to leverage faster veterinary approvals to create a revenue stream for her ultimate goal of extending human life and establishing a beloved drug company.

Question Explanation

Each of the following, if true, would weaken the suggestions made by Dr. Austad EXCEPT:
The question asks which statement does not weaken Dr. Steven Austad's suggestions about studying animal longevity. Dr. Austad argues that lab mice, due to their inbreeding and cushy lab environments, are not good models for studying ageing in natural settings. He suggests looking at animals like wild sparrows instead, which may offer more relevant insights into longevity.

Correct Answer Explanation

(1) Lab mice are the most popular model organisms in research, with a vast amount of existing literature and data available.
This statement highlights the popularity and extensive research done on lab mice, but it does not directly address Dr. Austad's specific concerns. Austad's critique is based on the genetic uniformity and artificial conditions of lab mice, which he believes distort ageing studies. The availability of extensive literature and data does not counter his argument that these mice do not accurately represent natural ageing processes. Therefore, this statement does not weaken Austad's suggestion that alternative models, like wild sparrows, might be more insightful for studying ageing.

Incorrect Answer Explanations

(2) Genetic engineering now creates lab mice with diversity similar to wild populations, reducing inbreeding issues.
This statement weakens Dr. Austad's argument because one of his main critiques is the lack of genetic diversity in lab mice due to inbreeding. If genetic engineering can produce lab mice that have genetic diversity similar to wild populations, it addresses and mitigates Austad's concern about the unnatural uniformity of lab mice. This would mean lab mice could potentially provide more accurate insights into natural ageing processes, thereby undermining Austad's call for alternative models.

(3) Comparative genomic studies have shown that key ageing-related genes in lab mice are highly similar to those in wild animals.
This statement also weakens Dr. Austad's position. If genomic studies show that the key genes related to ageing in lab mice are similar to those in wild animals, it suggests that findings from lab mice studies could be relevant and applicable to understanding ageing in other animals. This directly challenges Austad's claim that lab mice are not suitable for ageing research due to their artificial conditions and genetic makeup.

(4) House sparrows are highly mobile and are difficult to maintain in stable populations within controlled research settings.
This statement weakens Dr. Austad's suggestion by pointing out a practical challenge with his proposed alternative. Austad suggests using house sparrows as a better model for studying longevity. However, if house sparrows are highly mobile and difficult to maintain in controlled research settings, it poses a significant logistical problem. This undermines the feasibility of using them as a practical alternative to lab mice, thereby weakening Austad's suggestion.

Directions for questions 9-12: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

Laboratory mice are very little help, [Dr. Steven Austad] thinks, in understanding ageing in animals that have not gone through decades of inbreeding and which live in environments that offer more danger than that inflicted in experiments. Lab mice, he feels, are not just a poor guide to the wider world of animal ageing; they are barely even mice any more. They are, in a phrase coined by one of his colleagues, just “mouse-like objects”. . . .

In early work on American opossums, he observed that those living on an island off the coast of Georgia, where there were no predators, seemed to age less rapidly than those on the mainland. This caused him to be sceptical about how much could be learned from inbred animals leading cushy lives (lab mice tend to live many times longer than their wild relatives). Instead, he seeks to study longevity in wild animals.

With a maximum recorded lifespan of just over 120 years, human beings are at the upper end of the animal longevity scale. But there are a few that outdo them. At an estimated 200 years, bowhead whales are thought to be the longest-living mammals. . . . In-depth studies of bowhead whales and Greenland sharks obviously pose difficulties. Long-lived invertebrates may not have as much to say about people as one might wish. And working with true methuselahs, backboned or not, might mean working on their timescales, which would hardly be helpful.

As a compromise between longevity and fecundity, Dr Austad proposes the house sparrow. In general, animal lifespans increase with size. But whereas wild mice live three or four months wild sparrows, similar in weight, can live almost 20 years. Understanding the physiological differences that grant these birds such long lives might, he reckons, lead to useful ideas for increasing the lifespans and healthspans of people, a species in which he is interested despite its basically domesticated nature.

Another off-kilter approach is to look at ageing not through the lens of animals that lead long lives in the wild but of animals that lead shorter lives in domesticity. Big breeds of dogs live less long than small ones; breeding them for size bred them for short lives, too. The mechanism by which that happened may be more tractable to study than most of those involved in ageing; selective breeding has changed relatively little of the dogs’ genome. And turning understanding thus gathered into a treatment would unleash a flood of dollars and love from people who own Great Danes, Newfoundlands and the like.

That is what Celine Halioua, the founder of Loyal, a San Francisco startup, wants to do. She knows which pathway she wants to target, and the company is getting a drug into trials. Animal trials are more easily done than human ones, and veterinary approval is far faster than medical approval. Ms Halioua’s hope is that by developing a life-lengthening supplement for big dogs, she can provide Loyal with a reliable revenue stream quite quickly. With that she can fund her long-term goal, the extension of human life. And it should help with her other heroic ambition—to found a drug company people actually like, even love.

Q.11 [12047429]

Celine Halioua’s business plan can be best summed up as which of the following?

1 ○ Create a reliable revenue stream through the development of innovative products and use it to support a long-term personal goal.

2 ○ Capitalise on a current need to quickly bring products to market and reinvest the profits into expanding research and development efforts.

3 ○ Develop and market a product to generate revenue, which will fund a long-term objective and help establish a well-regarded company.

4 ○ Work with a government agency to create an initial product that will help fund her long-term goal of creating a company that everyone loves.

Correct Answer – (3)

Passage Summary

The author begins by introducing Dr. Steven Austad's scepticism about using laboratory mice for ageing studies, noting that these inbred, sheltered animals offer little insight into natural ageing processes. Austad considers lab mice to be "mouse-like objects" rather than true representatives of their species.

They then describe Austad's early work with American opossums, where he observed that island opossums, free from predators, aged more slowly than mainland ones. This observation led him to prefer studying wild animals to understand longevity.

Next, the author discusses the challenge of studying long-lived animals like bowhead whales and Greenland sharks, noting the impracticality of working with such species. Austad proposes using house sparrows as a compromise, as they live much longer than similarly sized wild mice. He believes that understanding the physiological traits of sparrows could provide insights into extending human lifespans and healthspans.

The author then explores another unconventional approach: studying the shorter lifespans of large domestic dog breeds compared to smaller ones. This method might reveal mechanisms of ageing since selective breeding for size has minimally altered the dogs' genome. Insights gained here could lead to treatments that extend lifespan.

Finally, the author introduces Celine Halioua, founder of Loyal, a startup aiming to develop a life-lengthening supplement for large dogs. Halioua plans to leverage faster veterinary approvals to create a revenue stream for her ultimate goal of extending human life and establishing a beloved drug company.

Question Explanation

Celine Halioua's business plan can be best summed up as which of the following?
This question asks which statement best summarises Celine Halioua's business plan, as described in the passage. The relevant details are found in the last paragraph, where Halioua's strategy for her company, Loyal, is discussed. Her plan involves creating a life-lengthening supplement for large dogs, generating a reliable revenue stream, and using this income to support her long-term goal of extending human life. Additionally, she aims to create a beloved drug company.

Correct Answer Explanation

(3) Develop and market a product to generate revenue, which will fund a long-term objective and help establish a well-regarded company.
This option captures the full scope of Halioua's business plan. The passage describes her strategy to develop a life-lengthening supplement for big dogs to generate revenue quickly. This revenue will be used to support her long-term goal of extending human life. Furthermore, she aspires to establish a drug company that people love, which is a key component of her vision. Therefore, this option accurately and comprehensively summarises her plan by highlighting all crucial aspects: the initial product, revenue generation, funding a long-term goal, and establishing a well-regarded company.

Incorrect Answer Explanations

(1) Create a reliable revenue stream through the development of innovative products and use it to support a long-term personal goal.
While this option is partially accurate, it lacks the specific details about establishing a well-regarded company. The passage explicitly mentions Halioua's aim to create a company that people love, which is a significant part of her business plan. This option only addresses the revenue and the long-term goal, omitting the crucial aspect of building a beloved company.

(2) Capitalise on a current need to quickly bring products to market and reinvest the profits into expanding research and development efforts.
This option is not fully aligned with the passage. It implies a broader focus on reinvesting profits into expanding R&D efforts generally rather than specifically supporting the goal of extending human life. Moreover, it does not mention Halioua's intention to create a well-regarded company, which is a significant part of her strategy. Therefore, it does not accurately summarise her business plan.

(4) Work with a government agency to create an initial product that will help fund her long-term goal of creating a company that everyone loves.
This option introduces an element that is not mentioned in the passage: working with a government agency. The passage does not suggest any involvement with government agencies in Halioua's plan. Additionally, while it mentions creating a company that everyone loves, the inclusion of the government agency is incorrect and not supported by the text. Thus, this option is not an accurate summary of her business plan.

Answer key/Solution

Passage Summary

The author begins by introducing Dr. Steven Austad's scepticism about using laboratory mice for ageing studies, noting that these inbred, sheltered animals offer little insight into natural ageing processes. Austad considers lab mice to be "mouse-like objects" rather than true representatives of their species.

They then describe Austad's early work with American opossums, where he observed that island opossums, free from predators, aged more slowly than mainland ones. This observation led him to prefer studying wild animals to understand longevity.

Next, the author discusses the challenge of studying long-lived animals like bowhead whales and Greenland sharks, noting the impracticality of working with such species. Austad proposes using house sparrows as a compromise, as they live much longer than similarly sized wild mice. He believes that understanding the physiological traits of sparrows could provide insights into extending human lifespans and healthspans.

The author then explores another unconventional approach: studying the shorter lifespans of large domestic dog breeds compared to smaller ones. This method might reveal mechanisms of ageing since selective breeding for size has minimally altered the dogs' genome. Insights gained here could lead to treatments that extend lifespan.

Finally, the author introduces Celine Halioua, founder of Loyal, a startup aiming to develop a life-lengthening supplement for large dogs. Halioua plans to leverage faster veterinary approvals to create a revenue stream for her ultimate goal of extending human life and establishing a beloved drug company.

Question Explanation

If the information given in the passage is true, which one of the following must also be true?
This question asks which statement must be true based on the information given in the passage. The passage discusses various aspects of studying ageing and longevity in animals, including critiques of using lab mice, insights from studying wild animals, and the impacts of selective breeding.

Correct Answer Explanation

(3) Selective breeding can have unintended consequences on longevity.
This statement must be true based on the passage. The text specifically mentions that breeding large breeds of dogs for size also resulted in shorter lifespans, demonstrating that selective breeding can indeed have unintended effects on longevity. This direct reference to the consequences of selective breeding on the lifespan of dogs confirms the truth of this statement.

Incorrect Answer Explanations

(1) Studying long-lived species can provide insights into the development of longevity.
While this statement seems logical, it is not explicitly confirmed by the passage. The text discusses the difficulties of studying long-lived species like bowhead whales and Greenland sharks due to their long timescales and the limited applicability of invertebrate longevity to humans. Therefore, the passage does

not definitively state that studying long-lived species will necessarily provide useful insights into longevity.

(2) The maximum lifespan of any species is not likely to be more than 200 years.
This statement is not supported by the passage. While the text mentions that bowhead whales are thought to live up to 200 years, it does not claim that this is the absolute maximum lifespan for any species. The passage only provides specific examples and does not make a general assertion about the maximum lifespan of all species.

(4) Wild mice are very likely to have a longer lifespan than laboratory mice.
This statement is incorrect based on the passage. The text states that lab mice tend to live many times longer than their wild relatives due to their protected and cushy environments in laboratories. Therefore, wild mice are actually less likely to have a longer lifespan compared to lab mice, making this statement false.

Directions for questions 13-16: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

In the history of Western aesthetics, the subject matters that received attention ranged from natural objects and phenomena, built structures, utilitarian objects, and human actions, to what is today regarded as the fine arts. However, beginning with the nineteenth century, the discourse has become increasingly focused on the fine arts. This narrowing attention occurred despite the prominence of the aesthetic attitude theory in modern aesthetics, according to which there is virtually no limit to what can become a source of aesthetic experience. The tendency to equate aesthetics with the philosophy of art became widespread in twentieth-century aesthetics, particularly within the Anglo-American tradition.

Challenges to this rather limited scope of aesthetics began during the latter half of the twentieth century with a renewed interest in nature and environment, followed by the exploration of popular arts. Everyday aesthetics continues this trajectory of widening scope by including objects, events, and activities that constitute people's daily life. However, it is more accurate to characterise this recent development as restoring the scope of aesthetics rather than opening a new arena.

In addition, many cultural traditions outside the Western sphere have long been concerned with the aesthetics of daily life. In some cultural traditions, such as Inuit and Navajo, aesthetic considerations are thoroughly integrated in daily activities, including making things such as tool. Even in other traditions, such as Japanese and Chinese, with distinctive art-making practices of paintings, literature, theatre, and the like, aesthetic practices permeate people's daily life. One of the findings of comparative aesthetics is that a greater emphasis is placed on the aesthetics of everyday life in many non-Western cultures than in the West.

Thus, the perception that everyday aesthetics is a new frontier of aesthetics discourse needs to be situated in the context of late twentieth-century Anglo-American aesthetics. That is, it was established as a reaction against what was considered to be an undue restriction on the scope of aesthetics. It aims to give due regard to the entirety of people's multi-faceted aesthetic life, including various ingredients of everyday life: artefacts of daily use, chores around the house, interactions with other people, and quotidian activities such as eating, walking, and bathing. Everyday aesthetics also seeks to liberate aesthetic inquiry from an almost exclusive focus on beauty characteristic of modern Western aesthetics. It includes within its purview those qualities that pervade everyday experience, such as pretty, cute, messy, gaudy, tasteful, dirty, lively, monotonous, to name only a few. These items and qualities are characterised by their ubiquitous presence in the daily life of people, regardless of their identity, occupation, lifestyle, economic status, social class, cultural background, and familiarity with art.

Beyond attending to more items and qualities for its inquiry, everyday aesthetics also raises theoretical issues that have not received adequate attention from the prevailing mainstream Western aesthetics. These include: indeterminate identity of the object of aesthetic experience due to a lack of an institutionally agreed-upon framing; changes and modifications everyday objects go through; general anonymity of the designer and creator, as well as absence of any clear authorship behind everyday objects; bodily engagements with objects and activities and their pragmatic outcome; perceived lack of criteria for aesthetic judgments. By raising these issues, everyday aesthetics challenges long-held assumptions underlying art-centred aesthetics discourse.

Q.13 [12047429]

The author primarily attempts to:

1 ○ critique the focus of modern Western aesthetics on fine arts.

2 ○ argue that everyday aesthetics restores the original scope of aesthetic inquiry.

3 ○ advocate for a renewed focus on aesthetic attitude theory in modern aesthetics.

4 ○ explain the development and scope of everyday aesthetics.

Solution:
Correct Answer : 4
Correct Answer – (4)

Answer key/Solution

Passage Summary

The author begins by discussing the historical range of subjects in Western aesthetics, which included natural objects, structures, utilitarian items, and human actions. However, from the nineteenth century onward, the focus narrowed to the fine arts, particularly within Anglo-American traditions.

They then describe how, in the latter half of the twentieth century, interest in nature, environment, and popular arts began to challenge this narrow scope. Everyday aesthetics continues this trend by including daily objects, events, and activities, thus restoring a broader scope.

The author highlights that many non-Western cultures have long integrated aesthetics into daily life. For example, Inuit and Navajo cultures incorporate aesthetic considerations into daily activities, while Japanese and Chinese traditions also include everyday aesthetics.

The author situates everyday aesthetics within late twentieth-century Anglo-American discourse, explaining that it emerged as a reaction against the narrow focus on fine arts. It aims to encompass the full range of people's aesthetic lives, including daily artefacts, chores, interactions, and activities, moving beyond the Western focus on beauty to include qualities like pretty, cute, messy, and gaudy.

Finally, the author discusses how everyday aesthetics raises theoretical issues that challenge traditional art-centred aesthetics, such as the changing nature of objects, their anonymous creators, bodily engagement with objects, and the lack of clear criteria for aesthetic judgments. This challenges long-held assumptions in mainstream Western aesthetics.

Question Explanation

The author primarily attempts to:
The question asks for the primary attempt of the author in the passage. We need to determine the main purpose or central argument that the author is making throughout the text. The passage discusses the historical context and evolution of Western aesthetics, highlighting a shift from a broad range of aesthetic subjects to a focus on fine arts and, more recently, to everyday aesthetics.

Correct Answer Explanation

(4) Explain the development and scope of everyday aesthetics
The passage traces the historical development of aesthetics, particularly highlighting how the focus has shifted from a broad range of subjects to primarily fine arts. The author then details how, from the latter half of the twentieth century, there has been a move towards everyday aesthetics, explaining what it encompasses and its significance. Thus, the primary attempt of the author is to explain the development and scope of everyday aesthetics.

Incorrect Answer Explanations

(1) Critique the focus of modern Western aesthetics on fine arts
While the passage does mention the limitation of modern Western aesthetics to fine arts and describes a shift towards everyday aesthetics, it does not primarily serve as a critique. The passage is more explanatory and descriptive rather than critical. The main focus is on explaining the evolution and current

scope of everyday aesthetics rather than solely criticising the previous focus on fine arts.

(2) Argue that everyday aesthetics restores the original scope of aesthetic inquiry
Although the passage states that everyday aesthetics can be seen as restoring the original scope of aesthetics, this is not the primary purpose of the author. The author's primary purpose is to explain the development and scope of everyday aesthetics rather than to argue specifically that it restores the original scope. The passage aims to provide a comprehensive overview rather than focus narrowly on the restorative aspect.

(3) Advocate for a renewed focus on aesthetic attitude theory in modern aesthetics
The aesthetic attitude theory is mentioned to highlight the potential broad scope of aesthetics, suggesting that anything can be a source of aesthetic experience. However, the passage does not primarily advocate for a renewed focus on this theory. Instead, it uses the theory to set the stage for discussing the evolution towards everyday aesthetics. The author's main purpose is to explain how everyday aesthetics has developed and what it encompasses, not to promote the aesthetic attitude theory itself.

By raising these issues, everyday aesthetics challenges long-held assumptions underlying art-centred aesthetics discourse.

Q.14 [12047429]

The author apparently believes that everyday aesthetics:

1 ○ represents a renaissance of non-restrictive aesthetics.

2 ○ Invalidates the established aesthetic discourse.

3 ○ challenges the tenets of aesthetic attitude theory.

4 ○ is the celebration of utilitarian qualities of daily life.

Solution:
Correct Answer : 1
Correct Answer – (1)

Answer key/Solution

Passage Summary

The author begins by discussing the historical range of subjects in Western aesthetics, which included natural objects, structures, utilitarian items, and human actions. However, from the nineteenth century onward, the focus narrowed to the fine arts, particularly within Anglo-American traditions.

They then describe how, in the latter half of the twentieth century, interest in nature, environment, and popular arts began to challenge this narrow scope. Everyday aesthetics continues this trend by including daily objects, events, and activities, thus restoring a broader scope.

The author highlights that many non-Western cultures have long integrated aesthetics into daily life. For example, Inuit and Navajo cultures incorporate aesthetic considerations into daily activities, while Japanese and Chinese traditions also include everyday aesthetics.

The author situates everyday aesthetics within late twentieth-century Anglo-American discourse, explaining that it emerged as a reaction against the narrow focus on fine arts. It aims to encompass the full range of people's aesthetic lives, including daily artefacts, chores, interactions, and activities, moving beyond the Western focus on beauty to include qualities like pretty, cute, messy, and gaudy.

Finally, the author discusses how everyday aesthetics raises theoretical issues that challenge traditional art-centred aesthetics, such as the changing nature of objects, their anonymous creators, bodily engagement with objects, and the lack of clear criteria for aesthetic judgments. This challenges long-held assumptions in mainstream Western aesthetics.

Question Explanation

The author apparently believes that everyday aesthetics:
This question asks us to determine the author's belief about everyday aesthetics based on the passage. We need to identify how the author views everyday aesthetics and its role or significance in the context of aesthetic discourse.

Correct Answer Explanation

(1) Represents a renaissance of non-restrictive aesthetics
The passage outlines how the scope of aesthetics, particularly within the Western tradition, narrowed over time to focus primarily on fine arts. However, it highlights that from the latter half of the twentieth century, there has been a shift towards a broader scope that includes everyday life. This shift is described as restoring or revitalising a more inclusive and non-restrictive approach to aesthetics. The author explains that everyday aesthetics encompasses a wide range of objects, events, and activities from daily life, thus broadening the scope of what can be considered aesthetically significant. This is indicative of a renaissance, or revival, of a more inclusive, non-restrictive approach to aesthetics.

Incorrect Answer Explanations

(2) Invalidates the established aesthetic discourse
While everyday aesthetics challenges some assumptions of the traditional art-focused aesthetic discourse, the author does not suggest that it completely invalidates it. Instead, the passage indicates that

everyday aesthetics expands the scope of aesthetic inquiry and raises new theoretical issues. It complements rather than invalidates the established discourse.

(3) Challenges the tenets of aesthetic attitude theory
The passage mentions the aesthetic attitude theory, which posits that virtually anything can be a source of aesthetic experience. Everyday aesthetics aligns with this theory by broadening the scope of aesthetic inquiry to include daily life. Therefore, it does not challenge the tenets of the aesthetic attitude theory; rather, it supports and extends them.

(4) Is the celebration of utilitarian qualities of daily life
Everyday aesthetics does include utilitarian objects and daily activities, but the author describes it as encompassing a wide range of aesthetic qualities, not just utilitarian ones. The passage lists various qualities, such as pretty, cute, messy, and lively, which go beyond merely utilitarian aspects. Therefore, it is not accurate to say that everyday aesthetics is solely a celebration of utilitarian qualities.

Directions for questions 13-16: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

In the history of Western aesthetics, the subject matters that received attention ranged from natural objects and phenomena, built structures, utilitarian objects, and human actions, to what is today regarded as the fine arts. However, beginning with the nineteenth century, the discourse has become increasingly focused on the fine arts. This narrowing attention occurred despite the prominence of the aesthetic attitude theory in modern aesthetics, according to which there is virtually no limit to what can become a source of aesthetic experience. The tendency to equate aesthetics with the philosophy of art became widespread in twentieth-century aesthetics, particularly within the Anglo-American tradition.

Challenges to this rather limited scope of aesthetics began during the latter half of the twentieth century with a renewed interest in nature and environment, followed by the exploration of popular arts. Everyday aesthetics continues this trajectory of widening scope by including objects, events, and activities that constitute people's daily life. However, it is more accurate to characterise this recent development as restoring the scope of aesthetics rather than opening a new arena.

In addition, many cultural traditions outside the Western sphere have long been concerned with the aesthetics of daily life. In some cultural traditions, such as Inuit and Navajo, aesthetic considerations are thoroughly integrated in daily activities, including making things such as tool. Even in other traditions, such as Japanese and Chinese, with distinctive art-making practices of paintings, literature, theatre, and the like, aesthetic practices permeate people's daily life. One of the findings of comparative aesthetics is that a greater emphasis is placed on the aesthetics of everyday life in many non-Western cultures than in the West.

Thus, the perception that everyday aesthetics is a new frontier of aesthetics discourse needs to be situated in the context of late twentieth-century Anglo-American aesthetics. That is, it was established as a reaction against what was considered to be an undue restriction on the scope of aesthetics. It aims to give due regard to the entirety of people's multi-faceted aesthetic life, including various ingredients of everyday life: artefacts of daily use, chores around the house, interactions with other people, and quotidian activities such as eating, walking, and bathing. Everyday aesthetics also seeks to liberate aesthetic inquiry from an almost exclusive focus on beauty characteristic of modern Western aesthetics. It includes within its purview those qualities that pervade everyday experience, such as pretty, cute, messy, gaudy, tasteful, dirty, lively, monotonous, to name only a few. These items and qualities are characterised by their ubiquitous presence in the daily life of people, regardless of their identity, occupation, lifestyle, economic status, social class, cultural background, and familiarity with art.

Beyond attending to more items and qualities for its inquiry, everyday aesthetics also raises theoretical issues that have not received adequate attention from the prevailing mainstream Western aesthetics. These include: indeterminate identity of the object of aesthetic experience due to a lack of an institutionally agreed-upon framing; changes and modifications everyday objects go through; general anonymity of the designer and creator, as well as absence of any clear authorship behind everyday objects; bodily engagements with objects and activities and their pragmatic outcome; perceived lack of criteria for aesthetic judgments. By raising these issues, everyday aesthetics challenges long-held assumptions underlying art-centred aesthetics discourse.

Q.15 [12047429]

Each of the following is likely an attribute of everyday aesthetics EXCEPT:

1 ○ it allows for a more personal and diverse range of aesthetic experiences.

2 ○ It emphasises the specific kind of object over the character of an experience.

3 ○ sensory experiences and practical interactions play a crucial role in it.

4 ○ ugliness, grotesqueness, repulsiveness, and disgust can be a part of it.

Solution:
Correct Answer : 2
Correct Answer – (2)

Answer key/Solution

Passage Summary

The author begins by discussing the historical range of subjects in Western aesthetics, which included natural objects, structures, utilitarian items, and human actions. However, from the nineteenth century onward, the focus narrowed to the fine arts, particularly within Anglo-American traditions.

They then describe how, in the latter half of the twentieth century, interest in nature, environment, and popular arts began to challenge this narrow scope. Everyday aesthetics continues this trend by including daily objects, events, and activities, thus restoring a broader scope.

The author highlights that many non-Western cultures have long integrated aesthetics into daily life. For example, Inuit and Navajo cultures incorporate aesthetic considerations into daily activities, while Japanese and Chinese traditions also include everyday aesthetics.

The author situates everyday aesthetics within late twentieth-century Anglo-American discourse, explaining that it emerged as a reaction against the narrow focus on fine arts. It aims to encompass the full range of people's aesthetic lives, including daily artefacts, chores, interactions, and activities, moving beyond the Western focus on beauty to include qualities like pretty, cute, messy, and gaudy.

Finally, the author discusses how everyday aesthetics raises theoretical issues that challenge traditional art-centred aesthetics, such as the changing nature of objects, their anonymous creators, bodily engagement with objects, and the lack of clear criteria for aesthetic judgments. This challenges long-held assumptions in mainstream Western aesthetics.

Question Explanation

Each of the following is likely an attribute of everyday aesthetics EXCEPT:
This question requires identifying which attribute is not likely associated with everyday aesthetics, based on the passage. We need to determine the characteristics of everyday aesthetics as described by the author and find the one that does not fit.

Correct Answer Explanation

(2) It emphasises the specific kind of object over the character of an experience.
The passage explains that everyday aesthetics is concerned with a wide range of objects, activities, and experiences from daily life, emphasising the overall character of these experiences rather than focusing on specific kinds of objects. The author discusses how everyday aesthetics includes various qualities and experiences that pervade daily life and how it challenges traditional art-focused aesthetics by considering the aesthetic value of everyday items and activities.

Incorrect Answer Explanations

(1) It allows for a more personal and diverse range of aesthetic experiences.
The passage highlights that everyday aesthetics broadens the scope of aesthetic inquiry to include the diverse and personal experiences of daily life. It encompasses various qualities and experiences that are part of everyday activities, making it inclusive and allowing for a wider range of aesthetic experiences.

(3) Sensory experiences and practical interactions play a crucial role in it.
The passage mentions that everyday aesthetics involves bodily engagements with objects and activities, highlighting the importance of sensory experiences and practical interactions. This indicates that everyday aesthetics values the practical and sensory aspects of daily life.

(4) Ugliness, grotesqueness, repulsiveness, and disgust can be a part of it.
The passage indicates that everyday aesthetics includes a wide range of aesthetic qualities, not just traditionally beautiful ones. It explicitly mentions that qualities like messy, gaudy, dirty, and monotonous are part of everyday aesthetics, suggesting that less traditionally aesthetic qualities like ugliness and repulsiveness are also included.

Directions for questions 13-16: The passage below is accompanied by four questions. Based on the passage, choose the best answer for each question.

In the history of Western aesthetics, the subject matters that received attention ranged from natural objects and phenomena, built structures, utilitarian objects, and human actions, to what is today regarded as the fine arts. However, beginning with the nineteenth century, the discourse has become increasingly focused on the fine arts. This narrowing attention occurred despite the prominence of the aesthetic attitude theory in modern aesthetics, according to which there is virtually no limit to what can become a source of aesthetic experience. The tendency to equate aesthetics with the philosophy of art became widespread in twentieth-century aesthetics, particularly within the Anglo-American tradition.

Challenges to this rather limited scope of aesthetics began during the latter half of the twentieth century with a renewed interest in nature and environment, followed by the exploration of popular arts. Everyday aesthetics continues this trajectory of widening scope by including objects, events, and activities that constitute people's daily life. However, it is more accurate to characterise this recent development as restoring the scope of aesthetics rather than opening a new arena.

In addition, many cultural traditions outside the Western sphere have long been concerned with the aesthetics of daily life. In some cultural traditions, such as Inuit and Navajo, aesthetic considerations are thoroughly integrated in daily activities, including making things such as tool. Even in other traditions, such as Japanese and Chinese, with distinctive art-making practices of paintings, literature, theatre, and the like, aesthetic practices permeate people's daily life. One of the findings of comparative aesthetics is that a greater emphasis is placed on the aesthetics of everyday life in many non-Western cultures than in the West.

Thus, the perception that everyday aesthetics is a new frontier of aesthetics discourse needs to be situated in the context of late twentieth-century Anglo-American aesthetics. That is, it was established as a reaction against what was considered to be an undue restriction on the scope of aesthetics. It aims to give due regard to the entirety of people's multi-faceted aesthetic life, including various ingredients of everyday life: artefacts of daily use, chores around the house, interactions with other people, and quotidian activities such as eating, walking, and bathing. Everyday aesthetics also seeks to liberate aesthetic inquiry from an almost exclusive focus on beauty characteristic of modern Western aesthetics. It includes within its purview those qualities that pervade everyday experience, such as pretty, cute, messy, gaudy, tasteful, dirty, lively, monotonous, to name only a few. These items and qualities are characterised by their ubiquitous presence in the daily life of people, regardless of their identity, occupation, lifestyle, economic status, social class, cultural background, and familiarity with art.

Beyond attending to more items and qualities for its inquiry, everyday aesthetics also raises theoretical issues that have not received adequate attention from the prevailing mainstream Western aesthetics. These include: indeterminate identity of the object of aesthetic experience due to a lack of an institutionally agreed-upon framing; changes and modifications everyday objects go through; general anonymity of the designer and creator, as well as absence of any clear authorship behind everyday objects; bodily engagements with objects and activities and their pragmatic outcome; perceived lack of criteria for aesthetic judgments. By raising these issues, everyday aesthetics challenges long-held assumptions underlying art-centred aesthetics discourse.

Q.16 [12047429]

Which of the following sequence of words/phrases best describes the key ideas of the passage?

1 ○ Fine arts; Aesthetic attitude theory; Non-Western cultures; Everyday aesthetics

2 ○ Western aesthetics; Anglo-American tradition; Everyday aesthetics; Non-Western cultures

3 ○ Anglo-American tradition; Aesthetic attitude theory; Everyday aesthetics; Daily life

4 ○ Twentieth-century aesthetics; Everyday aesthetics; Everyday life; Theoretical issues

Solution:
Correct Answer : 4
Correct Answer – (4)

Answer key/Solution

Passage Summary

The author begins by discussing the historical range of subjects in Western aesthetics, which included natural objects, structures, utilitarian items, and human actions. However, from the nineteenth century onward, the focus narrowed to the fine arts, particularly within Anglo-American traditions.

They then describe how, in the latter half of the twentieth century, interest in nature, environment, and popular arts began to challenge this narrow scope. Everyday aesthetics continues this trend by including daily objects, events, and activities, thus restoring a broader scope.

The author highlights that many non-Western cultures have long integrated aesthetics into daily life. For example, Inuit and Navajo cultures incorporate aesthetic considerations into daily activities, while Japanese and Chinese traditions also include everyday aesthetics.

The author situates everyday aesthetics within late twentieth-century Anglo-American discourse, explaining that it emerged as a reaction against the narrow focus on fine arts. It aims to encompass the full range of people's aesthetic lives, including daily artefacts, chores, interactions, and activities, moving beyond the Western focus on beauty to include qualities like pretty, cute, messy, and gaudy.

Finally, the author discusses how everyday aesthetics raises theoretical issues that challenge traditional art-centred aesthetics, such as the changing nature of objects, their anonymous creators, bodily engagement with objects, and the lack of clear criteria for aesthetic judgments. This challenges long-held assumptions in mainstream Western aesthetics.

Question Explanation

Which of the following sequence of words/phrases best describes the key ideas of the passage?
This question requires us to identify the sequence of words or phrases that best captures the key ideas of the passage. We need to consider the main themes and concepts discussed and how they are organised.

Correct Answer Explanation

(4) Twentieth-century aesthetics; Everyday aesthetics; Everyday life; Theoretical issues

This sequence accurately reflects the key ideas and structure of the passage:
● Twentieth-century aesthetics: The passage starts by discussing the focus of aesthetics in the twentieth century, particularly within the Anglo-American tradition, where the attention was mainly on fine arts.
● Everyday aesthetics: The passage then describes the shift towards a broader scope that includes everyday aesthetics, which expands aesthetic inquiry beyond the fine arts to include more mundane aspects of life.
● Everyday life: The author explains how everyday aesthetics involves various elements of daily life, such as utilitarian objects, chores, interactions, and activities like eating and walking.
● Theoretical issues: Finally, the passage addresses the theoretical issues raised by this broader scope of aesthetics, such as the indeterminate identity of aesthetic objects, changes in everyday objects, anonymity of designers, and the practical engagement with objects.

This sequence effectively captures the main points and follows the logical progression of the passage,

making it the best choice.

Incorrect Answer Explanations

(1) Fine arts; Aesthetic attitude theory; Non-Western cultures; Everyday aesthetics
This sequence includes important concepts but does not reflect the best order to capture the flow of the passage. The passage starts by discussing fine arts within the context of twentieth-century aesthetics and mentions aesthetic attitude theory as part of this background. However, non-Western cultures are not a primary focus and are introduced later to highlight differences in aesthetic traditions. Everyday aesthetics is central to the passage, but this sequence does not accurately reflect its primary focus on the development and scope of everyday aesthetics within the Western tradition.

(2) Western aesthetics; Anglo-American tradition; Everyday aesthetics; Non-Western cultures
This sequence includes relevant terms but is not in the best order. "Western aesthetics" is too broad and does not specifically capture the twentieth-century context. The Anglo-American tradition is part of the discussion on the narrow focus on fine arts. Everyday aesthetics is correctly included but should be more central. Non-Western cultures are mentioned to contrast with Western traditions but are not the primary focus of the passage.

(3) Anglo-American tradition; Aesthetic attitude theory; Everyday aesthetics; Daily life
This sequence is close but not as comprehensive as the correct answer. It captures some key ideas but does not emphasise the twentieth-century context or the theoretical issues raised by everyday aesthetics. The passage discusses how the Anglo-American tradition focused on fine arts and mentions aesthetic attitude theory to set the stage for the broader scope of everyday aesthetics. However, it misses the detailed discussion of theoretical issues.

Q.17 [12047429]
The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

The earliest ecological genetic studies attempted to document the action of natural selection in wild populations in support of Darwinian theory. In so doing, these studies attempted to demonstrate that evolution by natural selection was not only a historical causal force, but that it also continued to act on the characteristics of wild populations in the present day. Under the assumption of gradualism, it was not clear whether natural selection acting on phenotypes in wild populations could be detected, let alone account for between species phenotypic differences. The starting observations of many of the earliest ecological genetic investigations, i.e., the phenotypes of most interest, were conspicuous phenotypic polymorphisms, such as the spotting patterns on butterfly wings or banding patterns of snail shells or polymorphisms of chromosomal rearrangements. These were either known to have a genetic basis or could safely be assumed to have one.

1 ○ Early studies in ecological genetics, focusing on genetic polymorphisms in wild populations, proved that Darwinian natural selection continues to act on phenotypic differences between species.

2 ○ Early ecological genetic studies focused on observing conspicuous phenotypic polymorphisms in wild populations to provide evidence for ongoing natural selection and Darwinian evolution.

3 ○ Initial ecological genetic studies, concentrating on easily observable evolution, sought to show that natural selection, as described by Darwin, remains a significant force in wild populations.

4 ○ The gradual nature of evolutionary change made it difficult to observe and measure these changes within the timeframe of scientific studies, casting doubt on the Darwinian theory of natural selection.

Solution:
Correct Answer : 2
Correct Answer – (2)

Answer key/Solution

The passage:
The passage describes the goals and challenges of the earliest ecological genetic studies. These studies aimed to provide evidence that natural selection, a core component of Darwinian theory, continued to shape phenotypic traits in wild populations. It highlights the researchers' focus on conspicuous phenotypic polymorphisms, which had a genetic basis, such as butterfly wing patterns and snail shell banding. The passage also touches upon the difficulty of detecting natural selection due to its gradual nature and the scepticism about whether it could account for differences between species.

Correct Answer Explanation:

Option 2: "Early ecological genetic studies focused on observing conspicuous phenotypic polymorphisms in wild populations to provide evidence for ongoing natural selection and Darwinian evolution."
This option captures the core ideas of the passage effectively. It specifies that the studies focused on observable phenotypic polymorphisms in wild populations. Additionally, it highlights the studies' goal to provide evidence for the ongoing process of natural selection, supporting Darwinian evolution. The details match the passage's discussion about how these studies were designed to show that natural selection is still a significant force in shaping phenotypic characteristics in the present day.

Incorrect Answer Explanations:

Option 1: "Early studies in ecological genetics, focusing on genetic polymorphisms in wild populations, proved that Darwinian natural selection continues to act on phenotypic differences between species."
This option is incorrect because it overstates the conclusions of the studies. The passage indicates that the studies attempted to provide evidence for ongoing natural selection but does not claim that they definitively proved this action on phenotypic differences between species. The word "proved" is too strong and misrepresents the cautious and investigative nature of scientific studies.

Option 3: "Initial ecological genetic studies, concentrating on easily observable evolution, sought to show that natural selection, as described by Darwin, remains a significant force in wild populations."
While partially correct, this option lacks specificity. It uses the phrase "easily observable evolution," which is vague compared to the passage's specific mention of "conspicuous phenotypic polymorphisms." The passage emphasizes the focus on observable polymorphisms like spotting patterns on butterfly wings and banding patterns of snail shells, rather than a general description of observable evolution.

Option 4: "The gradual nature of evolutionary change made it difficult to observe and measure these changes within the timeframe of scientific studies, casting doubt on the Darwinian theory of natural selection."
This option is incorrect because it misinterprets the passage's message. Although the passage acknowledges the challenge posed by gradualism in detecting natural selection, it does not suggest that this difficulty casts doubt on Darwinian theory. Instead, it discusses how early ecological genetic studies aimed to document natural selection despite these challenges, focusing on current observable phenotypic polymorphisms.

Q.18 [12047429]

The passage given below is followed by four alternate summaries. Choose the option that best captures the essence of the passage.

While Ai-Da claims to advance AI public literacy and foster critical debate around intelligent systems, it instead ends up perpetuating popular misunderstandings about AI creativity, agency, and consciousness. Built in 2019, Ai-Da is a humanoid robot capable of creating drawings, paintings, and composing poetry. However, the project often conceals or miscommunicates the technical aspects of Ai-Da's capabilities in a manner that encourages the public to misattribute human-like traits to the robot. This lack of transparency in the presentation of Ai-Da's abilities and the creative processes involved risks reinforcing existing misconceptions about AI, rather than promoting a more nuanced understanding. The anthropomorphism and posthuman embodiment of the Ai-Da project show the dangers of AI hype can be obscured when presented through the lens of public art.

1 ○ Ai-Da's artistic abilities mislead the public about its true capabilities, fostering misconceptions rather than promoting creativity.

2 ○ Ai-Da miscommunicates its capabilities, reinforcing misconceptions about notions of creativity, agency, and consciousness.

3 ○ The Ai-Da project illustrates how public art can obscure the understanding of AI as an anthropomorphic and posthuman embodiment.

4 ○ Ai-Da perpetuates AI misunderstandings by miscommunicating its capabilities and encouraging anthropomorphism.

✖

Answer key/Solution

Solution:
Correct Answer : 4
Your Answer : 3
Correct Answer – (4)

The Passage:

The passage critiques the Ai-Da project, a humanoid robot created in 2019 capable of producing art and poetry. Although the project claims to enhance public understanding of AI and stimulate critical debate, it often misleads the public about the true capabilities of AI. By obscuring the technical aspects and encouraging the attribution of human-like traits to Ai-Da, the project perpetuates misconceptions about AI creativity, agency, and consciousness. The passage highlights the risks of anthropomorphism and the potential for AI hype to distort public understanding when presented through public art.

Correct Answer Explanation:

Option 4: "Ai-Da perpetuates AI misunderstandings by miscommunicating its capabilities and encouraging anthropomorphism."
This option captures the essence of the passage accurately. The passage critiques Ai-Da for miscommunicating its technical abilities, which leads to the public attributing human-like traits to the robot. This miscommunication fosters misconceptions about AI's nature and capabilities, aligning with the passage's main points about the risks of anthropomorphism and the project's failure to promote a nuanced understanding of AI.

Incorrect Answer Explanations:

Option 1: "Ai-Da's artistic abilities mislead the public about its true capabilities, fostering misconceptions rather than promoting creativity."
This option is incorrect because it suggests that the primary issue is about promoting creativity, which the passage does not emphasize. The passage is more concerned with how Ai-Da misleads the public about AI capabilities and encourages anthropomorphism, rather than the impact on creativity.

Option 2: "Ai-Da miscommunicates its capabilities, reinforcing misconceptions about notions of creativity, agency, and consciousness."
While this option correctly identifies that Ai-Da miscommunicates its capabilities and reinforces misconceptions, it does not fully capture the emphasis on anthropomorphism and the attribution of human-like traits to the robot. These are crucial points in the passage that this option overlooks.
Option 3: "The Ai-Da project illustrates how public art can obscure the understanding of AI as an anthropomorphic and posthuman embodiment."
This option is incorrect because it focuses on the role of public art in obscuring understanding, rather than specifically on Ai-Da's miscommunication and the perpetuation of misconceptions. The passage critiques Ai-Da's project more for its misrepresentation of AI capabilities than for its artistic presentation alone.

Q.19 [12047429]

The four sentences (labelled 1, 2, 3 and 4) given below, when properly sequenced, would yield a coherent paragraph. Decide on the proper sequencing of the order of the sentences and key in the sequence of the four numbers as your answer.

1. It is a biographical fact, documented by the letters, that Dickinson led a rich social life in her teens and twenties and then, beginning in her thirties, gradually withdrew from what today we would call “face-to-face” interaction with friends.
2. The editing of the letters, as well as perspectives on Dickinson’s life, have changed dramatically since the 1890 edition of her poems sparked enough public interest.
3. Interpretations of Dickinson’s reclusiveness are a case in point.
4. All editing is an act of interpretation and is inextricable from its time.

Answer key/Solution

Solution:
Correct Answer : 4231
Your Answer : 4132
Correct Answer – 4231

Analysis of the Sentences:

Sentence 1: "It is a biographical fact, documented by the letters, that Dickinson led a rich social life in her teens and twenties and then, beginning in her thirties, gradually withdrew from what today we would call "face-to-face" interaction with friends."
• This sentence discusses a biographical fact about Emily Dickinson, providing specific details about her social life and subsequent withdrawal.

Sentence 2: The editing of the letters, as well as perspectives on Dickinson's life, have changed dramatically since the 1890 edition of her poems sparked enough public interest.
• This sentence talks about how the editing of Dickinson's letters and the perspectives on her life have evolved since the publication of her poems in 1890.

Sentence 3: Interpretations of Dickinson's reclusiveness are a case in point.
• This sentence mentions that interpretations of Dickinson's reclusiveness serve as an example.

Sentence 4: All editing is an act of interpretation and is inextricable from its time.
• This sentence makes a general statement about the nature of editing, stating that it is always an act of interpretation influenced by its time.

Logical Flow:

Sentence 4: All editing is an act of interpretation and is inextricable from its time.
Introductory Sentence: This sentence introduces the general idea that editing is subjective and influenced by the period in which it is done.

Sentence 2: The editing of the letters, as well as perspectives on Dickinson's life, have changed dramatically since the 1890 edition of her poems sparked enough public interest.
Supporting Context: This sentence provides specific context about how editing and perspectives on Dickinson's life have changed over time, illustrating the general idea introduced in Sentence 4.

Sentence 3: Interpretations of Dickinson's reclusiveness are a case in point.
Specific Example: This sentence narrows down to a specific example of how interpretations of Dickinson's life, particularly her reclusiveness, have changed, reinforcing the idea from Sentence 2.

Sentence 1: "It is a biographical fact, documented by the letters, that Dickinson led a rich social life in her teens and twenties and then, beginning in her thirties, gradually withdrew from what today we would call "face-to-face" interaction with friends."
Detailed Explanation: This sentence provides a detailed account of Dickinson's life, particularly her reclusiveness, which ties back to the changes in interpretation mentioned in Sentences 2 and 3.

Bookmark FeedBack

Q.20 [12047429]

The four sentences (labelled 1, 2, 3 and 4) given below, when properly sequenced, would yield a coherent paragraph. Decide on the proper sequencing of the order of the sentences and key in the sequence of the four numbers as your answer.

1. “This world,” mused Horace Walpole, “is a comedy to those that think, a tragedy to those that feel.”
2. The process of life is oblivious to the beings it makes and breaks in the course of its perpetuation.
3. And while no living creature escapes this carnage, only humans bear the burden of awareness.
4. For Peter Wessel Zapffe, humans are condemned to do both.

Solution:
Correct Answer : 1423
Your Answer : 1423
Correct Answer – 1423

Answer key/Solution

Analysis of the Sentences:

Sentence 1: “This world,” mused Horace Walpole, “is a comedy to those that think, a tragedy to those that feel.”
• Introduces a philosophical musing by Horace Walpole about the dual nature of the world.

Sentence 2: "The process of life is oblivious to the beings it makes and breaks in the course of its perpetuation."
• Discusses the indifferent nature of the life process, suggesting that life continues without regard for the beings it affects.

Sentence 3: "And while no living creature escapes this carnage, only humans bear the burden of awareness."
• Highlights the uniqueness of human awareness in the face of life's indifferent process.

Sentence 4: "For Peter Wessel Zapffe, humans are condemned to do both."
• References Peter Wessel Zapffe's view, suggesting that humans must engage in both thinking and feeling.

Logical flow

Sentence 1: “This world,” mused Horace Walpole, “is a comedy to those that think, a tragedy to those that feel.”
Introductory Statement: Sets the stage by introducing a philosophical observation about the world.

Sentence 4: "For Peter Wessel Zapffe, humans are condemned to do both."
Perspective Link: Connects Walpole's observation to Zapffe's perspective, explaining that humans are doomed to experience both comedy and tragedy.

Sentence 2: "The process of life is oblivious to the beings it makes and breaks in the course of its perpetuation."
Contextual Background: Provides context about life's indifferent process, establishing the harsh environment in which humans exist.

Sentence 3: "And while no living creature escapes this carnage, only humans bear the burden of awareness."
Unique Human Burden: Concludes with the idea that humans uniquely suffer from awareness of life's indifferent nature, reinforcing the previous points.

Q.21 [12047429]

Five jumbled up sentences (labelled 1, 2, 3, 4 and 5), related to a topic, are given below. Four of them can be put together to form a coherent paragraph. Identify the odd sentence and key in the number of that sentence as your answer.

1. They might be thoughts that we long had but never articulated or instantaneous insights in which something entirely new and unfamiliar suddenly comes to mind.
2. The gulf between our solitary thoughts and the words that would convey them to others constantly confronts us all.
3. And yet, venturing to investigate these cases can illuminate the deeper challenges that we face in articulation and transform our conception of ourselves.
4. The thoughts we struggle to articulate might be as momentous as a transformative moral epiphany or as ordinary as an insight into a movie or the hurtful behaviour of a friend.
5. They might seem hopeful or alarming, frivolous or serious, and lead us to find value in certain things or worry about others.

✖

Solution:
Correct Answer : 3
Your Answer : 5
Correct Answer – 3

Answer key/Solution

Analyzing Each Sentence:

Sentence 1: "They might be thoughts that we long had but never articulated or instantaneous insights in which something entirely new and unfamiliar suddenly comes to mind."
• This sentence talks about the nature of thoughts: long-held or instantaneous insights.

Sentence 2: "The gulf between our solitary thoughts and the words that would convey them to others constantly confronts us all."
• This sentence introduces the idea of the difficulty in articulating thoughts.

Sentence 3: "And yet, venturing to investigate these cases can illuminate the deeper challenges that we face in articulation and transform our conception of ourselves."
• This sentence focuses on the benefits of investigating these challenges.

Sentence 4: "The thoughts we struggle to articulate might be as momentous as a transformative moral epiphany or as ordinary as an insight into a movie or the hurtful behaviour of a friend."
• This sentence expands on the kinds of thoughts we struggle to articulate, from significant to mundane.

Sentence 5: "They might seem hopeful or alarming, frivolous or serious, and lead us to find value in certain things or worry about others."
• This sentence continues the description of the nature of thoughts, emphasizing their varied impacts.

Forming a Coherent Paragraph:

Start with Sentence 2: "The gulf between our solitary thoughts and the words that would convey them to others constantly confronts us all."
• This introduces the main theme: the challenge of articulating thoughts.

Follow with Sentence 4: "The thoughts we struggle to articulate might be as momentous as a transformative moral epiphany or as ordinary as an insight into a movie or the hurtful behaviour of a friend."
• This builds on the theme by giving examples of such thoughts.

Continue with Sentence 5: "They might seem hopeful or alarming, frivolous or serious, and lead us to find value in certain things or worry about others."
• This further elaborates on the nature and impact of these thoughts.

Conclude with Sentence 1: "They might be thoughts that we long had but never articulated or instantaneous insights in which something entirely new and unfamiliar suddenly comes to mind."
• This wraps up the paragraph by emphasizing the different origins of these thoughts.

The coherent paragraph formed is:
"The gulf between our solitary thoughts and the words that would convey them to others constantly confronts us all. The thoughts we struggle to articulate might be as momentous as a transformative moral epiphany or as ordinary as an insight into a movie or the hurtful behaviour of a friend. They might seem hopeful or alarming, frivolous or serious, and lead us to find value in certain things or worry about others.

They might be thoughts that we long had but never articulated or instantaneous insights in which something entirely new and unfamiliar suddenly comes to mind."

Identifying the Odd Sentence:

Sentence 3 does not fit into the coherent paragraph formed. It introduces a new angle about investigating these challenges and transforming our conception of ourselves, which diverges from the unified theme of the difficulty and nature of articulating thoughts.

Bookmark FeedBack

Q.22 [12047429]

Five jumbled up sentences (labelled 1, 2, 3, 4 and 5), related to a topic, are given below. Four of them can be put together to form a coherent paragraph. Identify the odd sentence and key in the number of that sentence as your answer.

1. A writer's soul screams to tell stories, and the impact we get to make on readers is an incredible corollary.
2. From each story, there has come an internal change, a new thought, or a realization I have come away with.
3. It isn't hard to guess you love books immensely—you have probably devoured many.
4. Sometimes, the impression was good, and other times bad, but I always came away with something.
5. While I have read a lot, from each book I've read, I can tell you something I learned.

✖

Answer key/Solution

Solution:
Correct Answer : 1
Your Answer : 3
Correct Answer – 1

Analyzing Each Sentence:

Sentence 1: "A writer's soul screams to tell stories, and the impact we get to make on readers is an incredible corollary."
• This sentence talks about the writer's perspective and the impact on readers, focusing on storytelling from the writer's viewpoint.

Sentence 2: "From each story, there has come an internal change, a new thought, or a realization I have come away with."
• This sentence emphasizes the personal impact and realizations gained from reading stories.

Sentence 3: "It isn't hard to guess you love books immensely—you have probably devoured many."
• This sentence addresses the reader directly, assuming their love for books.

Sentence 4: "Sometimes, the impression was good, and other times bad, but I always came away with something."
• This sentence discusses the varying impressions left by stories but highlights that each story leaves a lasting impact.

Sentence 5: "While I have read a lot, from each book I've read, I can tell you something I learned."
• This sentence conveys the knowledge and lessons learned from each book read.

Forming a Coherent Paragraph:

Start with Sentence 3: "It isn't hard to guess you love books immensely—you have probably devoured many."
• This introduces the reader's passion for books.

Follow with Sentence 5: "While I have read a lot, from each book I've read, I can tell you something I learned."
• This builds on the theme by discussing the knowledge gained from reading many books.

Continue with Sentence 2: "From each story, there has come an internal change, a new thought, or a realization I have come away with."
• This adds to the discussion by highlighting the internal changes and realizations from reading.

Conclude with Sentence 4: "Sometimes, the impression was good, and other times bad, but I always came away with something."
• This wraps up the paragraph by emphasizing that every reading experience leaves a lasting impact, whether good or bad.

The coherent paragraph formed is:
"It isn't hard to guess you love books immensely—you have probably devoured many. While I have read a lot, from each book I've read, I can tell you something I learned. From each story, there has come an internal change, a new thought, or a realization I have come away with. Sometimes, the impression was good, and other times bad, but I always came away with something."

Identifying the Odd Sentence:

Sentence 1 does not fit into the coherent paragraph formed. It introduces the writer's perspective and the impact on readers, which diverges from the unified theme of the personal impact and realizations from reading.

Q.23 [12047429]

There is a sentence that is missing in the paragraph below. Look at the paragraph and decide where (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: Thus, given that dominance and prestige entail different patterns of interpersonal behaviours, these status-oriented strategies were likely motivated by (and rewarded with) different kinds of emotions.

Paragraph: Both dominance and prestige are likely adaptive, in that they provide access to resources; they represent different strategies for obtaining those rewards. __1__. Over the course of evolutionary history, dominant individuals obtained status by intimidating subordinates. In contrast, prestigious individuals obtained status by helping subordinates and sharing their knowledge with them; subordinates would, in turn, willingly grant resources to prestigious individuals out of respect. __2__. Specifically, dominant individuals may experience hubristic pride in response to success in an agonistic encounter. In non-human animals, this experience may be a simple sense of superiority; in humans, this experience became the more cognitively complex self-conscious emotion of hubristic pride. __3__. In turn, this positive emotional experience would reinforce and motivate the continued use of force and intimidation to maintain one's dominance. __4__.

1 ○ Option 3

2 ○ Option 2

3 ○ Option 4

4 ○ Option 1

Answer key/Solution

Solution:
Correct Answer : 2
Correct Answer – (2) Option 2

Analyzing the Sentence:

Sentence: Thus, given that dominance and prestige entail different patterns of interpersonal behaviours, these status-oriented strategies were likely motivated by (and rewarded with) different kinds of emotions.

Key Elements:
• Transition Word ("Thus"): This indicates a conclusion or inference based on previously mentioned information.
• Different Patterns of Interpersonal Behaviours: This highlights that dominance and prestige involve distinct ways of interacting with others.
• Motivation and Reward: The sentence emphasizes that these strategies are driven by and yield different emotional outcomes.

The sentence serves as a bridge, connecting the description of dominance and prestige strategies to their emotional motivations and rewards.

Examining Each Blank:

Blank 1:
Before Blank 1: "Both dominance and prestige are likely adaptive, in that they provide access to resources; they represent different strategies for obtaining those rewards."
• This introduces dominance and prestige as adaptive strategies for obtaining resources.

After Blank 1: "Over the course of evolutionary history, dominant individuals obtained status by intimidating subordinates."
• This sentence starts explaining the historical behaviours associated with dominance.

Fitment Analysis: The given sentence doesn't fit well here because the flow from discussing strategies in general to historical behaviours is disrupted by inserting a sentence about emotional motivations. Blank 1 is not a good fit.

Blank 2:
Before Blank 2: "In contrast, prestigious individuals obtained status by helping subordinates and sharing their knowledge with them; subordinates would, in turn, willingly grant resources to prestigious individuals out of respect."
• This contrasts dominance with prestige, showing different methods of obtaining status.

After Blank 2: "Specifically, dominant individuals may experience hubristic pride in response to success in an agonistic encounter."
• This starts discussing specific emotions associated with dominance.

Fitment Analysis: The given sentence fits well here as it logically connects the different methods (dominance and prestige) to the idea of different emotional rewards or motivations. This creates a smooth transition to the next sentence. Blank 2 is a good fit.

Blank 3:
Before Blank 3: "Specifically, dominant individuals may experience hubristic pride in response to success

in an agonistic encounter. In non-human animals, this experience may be a simple sense of superiority; in humans, this experience became the more cognitively complex self-conscious emotion of hubristic pride."
• This discusses specific emotions associated with dominance.

After Blank 3: "In turn, this positive emotional experience would reinforce and motivate the continued use of force and intimidation to maintain one's dominance."
• This explains how emotion reinforces behaviour.

Fitment Analysis: The given sentence doesn't fit well here because it would interrupt the detailed explanation of emotions related to dominance. Blank 3 is not a good fit.

Blank 4:

Before Blank 4: "In turn, this positive emotional experience would reinforce and motivate the continued use of force and intimidation to maintain one's dominance."
• This explains how the emotion reinforces behaviour.

After Blank 4: There is no sentence after Blank 4; this is the end of the paragraph.

Fitment Analysis: The given sentence doesn't fit well here because it introduces new information rather than concluding the paragraph. Blank 4 is not a good fit.

Conclusion:
The best fit for the given sentence is Blank 2, as it smoothly transitions from discussing different methods (dominance and prestige) to the idea of different emotional rewards or motivations. This logical flow maintains the coherence of the paragraph.

Q.24 [12047429]

There is a sentence that is missing in the paragraph below. Look at the paragraph and decide where (option 1, 2, 3, or 4) the following sentence would best fit.

Sentence: They act, and either fail or succeed.

Paragraph: So many are filled with ambition but ruled by fear. __1__. Their inner voice is telling them they're going to fail and that they'll make a fool of themselves. __2__. The "stupids" either don't hear this voice or choose to ignore it. __3__. You envy the ones who don't fail, and you mock the ones who do. Unlike you, both categories have actually done something. __4__. So you tell yourself the successful ones got lucky and the "failures" — well, they prove your point, don't they?

1 ○ Option 2

2 ○ Option 1

3 ○ Option 4

4 ○ Option 3

Answer key/Solution

Solution:
Correct Answer : 4
Your Answer : 2
Correct Answer – (4) Option 3

Analyzing the Sentence:

Sentence: They act, and either fail or succeed.
• Action-Oriented: The sentence highlights action and its potential outcomes—failure or success.
• Simple Statement: It is a straightforward declaration about the consequences of taking action.

Examining Each Blank:

Blank 1:
Before Blank 1: "So many are filled with ambition but ruled by fear."
• This introduces the concept of ambition being overshadowed by fear.

After Blank 1: "Their inner voice is telling them they're going to fail and that they'll make a fool of themselves."
• This describes the internal fear preventing action.

Fitment Analysis: The sentence "They act, and either fail or succeed" contrasts with the fear preventing action, making Blank 1 not a good fit.

Blank 2:
Before Blank 2: "Their inner voice is telling them they're going to fail and that they'll make a fool of themselves."
• This continues the description of the fear holding people back.

After Blank 2: "The "stupids" either don't hear this voice or choose to ignore it."
• This introduces a group of people who are not influenced by fear.

Fitment Analysis: The sentence "They act, and either fail or succeed" fits better after introducing the group that ignores fear and acts despite it. However, it doesn't provide the necessary antecedent directly. Blank 2 is not the best fit.

Blank 3:
Before Blank 3: "The "stupids" either don't hear this voice or choose to ignore it."
• This identifies a group that acts regardless of fear.

After Blank 3: "You envy the ones who don't fail, and you mock the ones who do. Unlike you, both categories have actually done something."
• This discusses the outcomes of action—success and failure—and the reactions to those outcomes.
Fitment Analysis: The sentence "They act, and either fail or succeed" fits well here because it directly follows the idea of acting without fear and leads into the discussion of the outcomes of those actions. The term "they" has a clear antecedent in "The 'stupids'." Blank 3 is the best fit.

Blank 4:

Before Blank 4: "You envy the ones who don't fail, and you mock the ones who do. Unlike you, both categories have actually done something."

• This explains the results and reactions to taking action.

After Blank 4: "So you tell yourself the successful ones got lucky and the “failures” — well, they prove your point, don’t they?"
• This concludes with rationalizations for others' success or failure.

Fitment Analysis: The sentence "They act, and either fail or succeed" does not fit well here, as it introduces a new idea rather than concluding the argument. Blank 4 is not a good fit.

Conclusion:
The given sentence fits best at Blank 3, as it logically connects the action taken by individuals who ignore fear to the resulting success or failure, which is then envied or mocked by others. The term “they” has a clear antecedent in “The ‘stupids’,” making the fit smooth.

Sec 2

Directions for questions 25 to 29: Answer the questions on the basis of the information given below.

In a country, the Single Transferable Vote (STV) method is utilized for the election of Rajsa members. To win a Rajsa seat, a candidate must secure a minimum quota of votes calculated by the formula:

$$\text{Minimum quota of votes required for Rajsa seat} = \frac{\text{Number of MLAs in the state}}{\text{Number of Rajsa seats in the state} + 1} + 1$$

MLAs of a state select the candidate(s) based on the preference votes. The process of the preference voting is descried below.
1) When filling out a ballot paper with names of candidates from various parties, MLAs rank candidates with 1 for their top preference, 2 for the next, and so forth. If a candidate(s) receive(s) enough first preference votes to meet or exceed the minimum quota of votes required to win a Rajsa seat, the candidate(s) is/are elected.
2) If all the available Rajsa seats are not filled after the above process, the surplus from topmost available preference votes of winning candidates is transferred to their next preference. If multiple candidates have surpluses, the largest surplus is transferred first.
3) To prevent wasted votes, if the required number of candidates is not elected after surplus transfers, the candidate with the fewest votes is eliminated.
4) The process steps No. 2 and 3 are repeated until enough candidates reach the quota to fill all available seats.
5) It is also known that no two candidates from a state receive the same number of first preference votes.
Assuming there are only six states-A, B, C, D, E, and F- in the country, the table below shows the number of Rajsa seats and MLAs in each state.

States	A	B	C	D	E	F
No. of Rajsa Seats	19	16	14	12	8	7
No. of MLAs	420	323	270	312	198	184

Q.25 [12047429]

Which state has the highest quota of votes required for a candidate to win a seat in the Rajsa?

1 ○ A

2 ○ D

3 ○ E

4 ○ F

Solution:

Correct Answer : 2

Answer key/Solution

The minimum quota of votes required a candidate to win in state A = 420/(19 + 1) + 1 = 22
Similarly, we can find for other states.

States	A	B	C	D	E	F
Quota of votes	22	20	19	25	23	24

Hence, state D has the highest quota of votes (i.e., 25) required for a candidate to win a seat in the Rajsa.

Directions for questions 25 to 29: Answer the questions on the basis of the information given below.

In a country, the Single Transferable Vote (STV) method is utilized for the election of Rajsa members. To win a Rajsa seat, a candidate must secure a minimum quota of votes calculated by the formula:

$$\text{Minimum quota of votes required for Rajsa seat} = \frac{\text{Number of MLAs in the state}}{\text{Number of Rajsa seats in the state} + 1} + 1$$

MLAs of a state select the candidate(s) based on the preference votes. The process of the preference voting is descried below.
1) When filling out a ballot paper with names of candidates from various parties, MLAs rank candidates with 1 for their top preference, 2 for the next, and so forth. If a candidate(s) receive(s) enough first preference votes to meet or exceed the minimum quota of votes required to win a Rajsa seat, the candidate(s) is/are elected.
2) If all the available Rajsa seats are not filled after the above process, the surplus from topmost available preference votes of winning candidates is transferred to their next preference. If multiple candidates have surpluses, the largest surplus is transferred first.
3) To prevent wasted votes, if the required number of candidates is not elected after surplus transfers, the candidate with the fewest votes is eliminated.
4) The process steps No. 2 and 3 are repeated until enough candidates reach the quota to fill all available seats.
5) It is also known that no two candidates from a state receive the same number of first preference votes.
Assuming there are only six states-A, B, C, D, E, and F- in the country, the table below shows the number of Rajsa seats and MLAs in each state.

States	A	B	C	D	E	F
No. of Rajsa Seats	19	16	14	12	8	7
No. of MLAs	420	323	270	312	198	184

Q.26 [12047429]
What is the minimum number of MLAs a party needs nationwide to secure a majority in the Rajsa?

✖

Solution:
Correct Answer : 784
Your Answer : 270

Answer key/Solution

Total Rajsa seats in the country = 19 + 16 + 14 + 12 + 8 + 7 = 76
To secure a majority a party needs = 76/2 + 1 = 39
The minimum quota of votes for states:

States	A	B	C	D	E	F
Quota of votes	22	20	19	25	23	24

For the minimum number of MLAs, we consider those states which have less quota of votes i.e., in this order C, B, A, E, F, D.
Hence, the minimum number of MLAs = 14 × 19 + 16 × 20 + 9 × 22 = 784.

Directions for questions 25 to 29: Answer the questions on the basis of the information given below.

In a country, the Single Transferable Vote (STV) method is utilized for the election of Rajsa members. To win a Rajsa seat, a candidate must secure a minimum quota of votes calculated by the formula:

$$\text{Minimum quota of votes required for Rajsa seat} = \frac{\text{Number of MLAs in the state}}{\text{Number of Rajsa seats in the state} + 1} + 1$$

MLAs of a state select the candidate(s) based on the preference votes. The process of the preference voting is descried below.
1) When filling out a ballot paper with names of candidates from various parties, MLAs rank candidates with 1 for their top preference, 2 for the next, and so forth. If a candidate(s) receive(s) enough first preference votes to meet or exceed the minimum quota of votes required to win a Rajsa seat, the candidate(s) is/are elected.
2) If all the available Rajsa seats are not filled after the above process, the surplus from topmost available preference votes of winning candidates is transferred to their next preference. If multiple candidates have surpluses, the largest surplus is transferred first.
3) To prevent wasted votes, if the required number of candidates is not elected after surplus transfers, the candidate with the fewest votes is eliminated.
4) The process steps No. 2 and 3 are repeated until enough candidates reach the quota to fill all available seats.
5) It is also known that no two candidates from a state receive the same number of first preference votes.
Assuming there are only six states-A, B, C, D, E, and F- in the country, the table below shows the number of Rajsa seats and MLAs in each state.

States	A	B	C	D	E	F
No. of Rajsa Seats	19	16	14	12	8	7
No. of MLAs	420	323	270	312	198	184

Q.27 [12047429]
If a single party secures an absolute majority in all states, what is the minimum number of candidates they would have in the Rajsa? (Assuming the party attempted to secure as many seats as possible.)

1 ○ 36

2 ○ 37

3 ○ 38

4 ○ 39

Solution:
Correct Answer : 2

Answer key/Solution

States	A	B	C	D	E	F
Minimum MLAs for absolute majority	211	162	136	157	100	93
Quota of votes	22	20	19	25	23	24

Hence, minimum number of Rajsa seats = 211/22 + 162/20 + 136/19 + 157/25 + 100/23 + 93/24
$\Rightarrow 9 + 8 + 7 + 6 + 4 + 3 = 37$.

5) It is also known that no two candidates from a state receive the same number of first preference votes.
Assuming there are only six states-A, B, C, D, E, and F- in the country, the table below shows the number of Rajsa seats and MLAs in each state.

States	A	B	C	D	E	F
No. of Rajsa Seats	19	16	14	12	8	7
No. of MLAs	420	323	270	312	198	184

Q.28 [12047429]

Due to administrative issues, a new state, G, has been formed from state A. State G has two Rajsa seats and 57 MLAs. All these MLAs cast their votes with the following preference ordering to fill two seats among four candidates: P, Q, R, and S.

Preference	16	24	17
1st	P	P	S
2nd	Q	R	P
3rd	R	Q	Q
4th	S	S	R

If the surplus votes of a candidate are redistributed in the next round to the remaining candidates in the same ratio as they were received in the previous round, then which candidates are elected?

1 ○ P, Q

2 ○ Q, R

3 ○ P, R

4 ○ P, S

Solution:
Correct Answer : 3

Answer key/Solution

The minimum quota of votes to win a seat in state G = [57/(2 + 1)] + 1 = 19 + 1 = 20.
In the 1st round, P received 40 votes and S received 17 votes. P is elected with 20 surplus votes. 20 votes are redistributed according to their 2nd preferences. 12 of the redistributed votes go to R, 8 to Q.
As none of the hopefuls have reached the quota, Q, the candidate with the fewest votes, is excluded. His 8 votes have R as the next-place choice, and so are transferred to R. This gives R 20 votes (quota) and he fills the second seat.

	Round 1	Round 2	Round 3	Result
P	40	20	20	Elected in round 1
Q	0	8	0	Excluded in round 2
R	0	12	20	Elected in round 3
S	17	17	17	

Hence, candidates P and R are elected.

In a country, the Single Transferable Vote (STV) method is utilized for the election of Rajsa members. To win a Rajsa seat, a candidate must secure a minimum quota of votes calculated by the formula:

$$\text{Minimum quota of votes required for Rajsa seat} = \frac{\text{Number of MLAs in the state}}{\text{Number of Rajsa seats in the state} + 1} + 1$$

MLAs of a state select the candidate(s) based on the preference votes. The process of the preference voting is descried below.
1) When filling out a ballot paper with names of candidates from various parties, MLAs rank candidates with 1 for their top preference, 2 for the next, and so forth. If a candidate(s) receive(s) enough first preference votes to meet or exceed the minimum quota of votes required to win a Rajsa seat, the candidate(s) is/are elected.
2) If all the available Rajsa seats are not filled after the above process, the surplus from topmost available preference votes of winning candidates is transferred to their next preference. If multiple candidates have surpluses, the largest surplus is transferred first.
3) To prevent wasted votes, if the required number of candidates is not elected after surplus transfers, the candidate with the fewest votes is eliminated.
4) The process steps No. 2 and 3 are repeated until enough candidates reach the quota to fill all available seats.
5) It is also known that no two candidates from a state receive the same number of first preference votes.
Assuming there are only six states-A, B, C, D, E, and F- in the country, the table below shows the number of Rajsa seats and MLAs in each state.

States	A	B	C	D	E	F
No. of Rajsa Seats	19	16	14	12	8	7
No. of MLAs	420	323	270	312	198	184

Q.29 [12047429]

State C's legislative assembly consists of 3 parties, X, Y, and Z, with seats in the ratio of 1 : 2 : 3. Assuming the parties initially attempted to secure as many seats as possible. If the parties engaged in cross-voting, i.e., changing their 1st preference for another party, and one party gained a majority in the Rajsa for state C, which of the following statements could be TRUE?
I. Parties X and Y were involved in cross-voting.
II. Parties Y and Z were involved in cross-voting.
III. Parties X, Y, and Z were involved in cross-voting.

1 ○ I only

2 ○ III only

3 ○ Both I & III

4 ○ All of them

Solution:

Correct Answer : 4

Answer key/Solution

The number of MLAs of party X, Y and Z are 45, 90 and 135 respectively.
The minimum quota of votes to win a seat in state C is 19.
Initially the possible number of seats of X, Y, and Z will be 2, 4, 7 respectively.
Party Z can gain the majority (i.e., 8 seats) in Rajsa.
The remaining MLAs of X, Y, and Z are 7, 14, and 2 respectively.
So Z must secure 19 MLAs among available 23 MLAs.
Hence, either X, Y or X, Y, Z (where Z votes for X or Y) were involved.

Directions for questions 30 to 34: Answer the questions on the basis of the information given below.

At a Mathematics class the teacher conducts a role play of a Bank where the students get to learn about investment and banking. Six students - Arko, Barkha, Chiku, Diksha, Esha, and Farukh - are given notes such that the total value of all the money is Rs.2,700.
It is also known that:
(i) For every group of any number of students among the six, the average amount per student for that group is an integer and no student has less than Rs.200 or more than Rs.800.
(ii) Barkha has more money than Chiku and the difference between their amounts is more than Rs.150 and less than Rs.200.
(iii) The amount with Diksha is equal to the sum of the amounts with Arko and Esha.
(iv) The amounts with Arko, Barkha, Esha, and Farukh are in the ratio 3 : 5 : 2 : 4 respectively.

Q.30 [12047429]

If the average amount per student in a group of three students is Rs.560, then which of the following represents students who are not in the group?

1 ○ Arko, Diksha, Farukh

2 ○ Arko, Chiku, Esha

3 ○ Chiku, Diksha, Esha

4 ○ Barkha, Diksha, Farukh

✔

Solution:

Correct Answer : 2

Your Answer : 2

Answer key/Solution

Step 1:

Let the amount with each student be denoted by their initials.

$\Rightarrow A + B + C + D + E + F = 2700$ (1)

$\Rightarrow A : B : E : F = 3 : 5 : 2 : 4$ (2)

$\Rightarrow D = A + E$ (3)

$\Rightarrow 150 < B - C < 200$ (4)

$\Rightarrow 200 < A, B, C, D, E, F < 800$ (5)

From (2), we can say that the amounts with A, B, E, and F are 3k, 5k, 2k and 4k respectively.

Also, from (3), we can say that the amount with D = A + E = 3k + 2k = 5k.

From (1) and (3), (A + E)/2 = (3k + 2k)/2 = 5k/2 = Integer

$\Rightarrow$ 5k = 2 × Integer

$\Rightarrow$ k is a multiple of 2.

For a group of three students, (B + D + F)/3 = (5k + 5k + 4k)/3 = 14k/3 = Integer

$\Rightarrow$ 14k = 3 × Integer

$\Rightarrow$ k is a multiple of 3.

For a group of four students, (A + B + D + F)/4 = (3k + 5k + 5k + 4k)/4 = 17k/4 = Integer

$\Rightarrow$ 17k = 4 × Integer

$\Rightarrow$ k is a multiple of 4.

For a group of five students, (A + B + D + E + F)/5 = (3k + 5k + 5k + 2k + 4k)/5 = 19k/5 = Integer

$\Rightarrow$ 19k = 5 × Integer

$\Rightarrow$ k is a multiple of 5.

From the above, we can conclude that k has to be a multiple of 2, 3, 4 and 5, so k has to be a multiple of 60.

Step 2:

The only value of k that satisfies all the conditions is k = 120. (Because if k = 60, then A < 200 and if k = 180, then B > 800)

So A = 360; B = 600; D = 600; E = 240; and F = 480.

Now, we have B = 600 and from (4), 150 < B – C < 200.

From (1), A + B + C + D + E + F = 2700 (which is also a multiple of 60.)

So C also has to be a multiple of 60, the only value that C can take is 420.

Finally we have the amounts with each student.

Arko	Barkha	Chiku	Diksha	Esha	Farukh	Total
Rs.360	Rs.600	Rs.420	600	Rs.240	Rs.480	Rs.2,700

Average of the first group of 3 students = Rs. 560

$\Rightarrow$ Total amount = 560 × 3 = Rs. 1,680.

The only three students whose total amount will be 1680 are Barkha, Diksha and Farukh.

Hence, the group of remaining students are Arko, Chiku and Esha.

Directions for questions 30 to 34: Answer the questions on the basis of the information given below.

At a Mathematics class the teacher conducts a role play of a Bank where the students get to learn about investment and banking. Six students - Arko, Barkha, Chiku, Diksha, Esha, and Farukh - are given notes such that the total value of all the money is Rs.2,700.

It is also known that:

(i) For every group of any number of students among the six, the average amount per student for that group is an integer and no student has less than Rs.200 or more than Rs.800.

(ii) Barkha has more money than Chiku and the difference between their amounts is more than Rs.150 and less than Rs.200.

(iii) The amount with Diksha is equal to the sum of the amounts with Arko and Esha.

(iv) The amounts with Arko, Barkha, Esha, and Farukh are in the ratio 3 : 5 : 2 : 4 respectively.

Q.31 [12047429]

If Arko, Chiku and Farukh invest their total amounts in a business venture and the profit at the end of the year is Rs.357, then find Farukh's share in the profit (in Rs.).

✔

Solution:

Correct Answer : 136

Your Answer : 136

Answer key/Solution

Step 1:

Let the amount with each student be denoted by their initials.

$\Rightarrow A + B + C + D + E + F = 2700$ (1)

$\Rightarrow A : B : E : F = 3 : 5 : 2 : 4$ (2)

$\Rightarrow D = A + E$ (3)

$\Rightarrow 150 < B - C < 200$ (4)

$\Rightarrow 200 < A, B, C, D, E, F < 800$ (5)

From (2), we can say that the amounts with A, B, E, and F are 3k, 5k, 2k and 4k respectively.

Also, from (3), we can say that the amount with D = A + E = 3k + 2k = 5k.

From (1) and (3), (A + E)/2 = (3k + 2k)/2 = 5k/2 = Integer

$\Rightarrow 5k = 2 \times$ Integer

$\Rightarrow$ k is a multiple of 2.

For a group of three students, (B + D + F)/3 = (5k + 5k + 4k)/3 = 14k/3 = Integer

$\Rightarrow 14k = 3 \times$ Integer

$\Rightarrow$ k is a multiple of 3.

For a group of four students, (A + B + D + F)/4 = (3k + 5k + 5k + 4k)/4 = 17k/4 = Integer

$\Rightarrow 17k = 4 \times$ Integer

$\Rightarrow$ k is a multiple of 4.

For a group of five students, (A + B + D + E + F)/5 = (3k + 5k + 5k + 2k + 4k)/5 = 19k/5 = Integer

$\Rightarrow 19k = 5 \times$ Integer

$\Rightarrow$ k is a multiple of 5.

From the above, we can conclude that k has to be a multiple of 2, 3, 4 and 5, so k has to be a multiple of 60.

Step 2:

The only value of k that satisfies all the conditions is k = 120. (Because if k = 60, then A < 200 and if k = 180, then B > 800)

So A = 360; B = 600; D = 600; E = 240; and F = 480.

Now, we have B = 600 and from (4), 150 < B – C < 200.

From (1), A + B + C + D + E + F = 2700 (which is also a multiple of 60.)

So C also has to be a multiple of 60, the only value that C can take is 420.

Finally we have the amounts with each student.

Arko	Barkha	Chiku	Diksha	Esha	Farukh	Total
Rs.360	Rs.600	Rs.420	600	Rs.240	Rs.480	Rs.2,700

Ratio of the investments of Arko, Chiku and Farukh = 6 : 7 : 8

Hence, Farukh's share in the profit = 8/21 × 357 = Rs.136.

(iv) The amounts with Arko, Barkha, Esha, and Farukh are in the ratio 3 : 5 : 2 : 4 respectively.

Q.32 [12047429]
If Chiku and Farukh together invested their total amount at 10% per annum Compound interest, then what will be the total amount (in Rs.) with them at the end of 2 years?

✔

Solution:
Correct Answer : 1089
Your Answer : 1089

Answer key/Solution

Step 1:
Let the amount with each student be denoted by their initials.
$\Rightarrow A + B + C + D + E + F = 2700$ (1)
$\Rightarrow A : B : E : F = 3 : 5 : 2 : 4$ (2)
$\Rightarrow D = A + E$ (3)
$\Rightarrow 150 < B - C < 200$ (4)
$\Rightarrow 200 < A, B, C, D, E, F < 800$ (5)
From (2), we can say that the amounts with A, B, E, and F are 3k, 5k, 2k and 4k respectively.
Also, from (3), we can say that the amount with D = A + E = 3k + 2k = 5k.
From (1) and (3), (A + E)/2 = (3k + 2k)/2 = 5k/2 = Integer
$\Rightarrow$ 5k = 2 × Integer
$\Rightarrow$ k is a multiple of 2.
For a group of three students, (B + D + F)/3 = (5k + 5k + 4k)/3 = 14k/3 = Integer
$\Rightarrow$ 14k = 3 × Integer
$\Rightarrow$ k is a multiple of 3.
For a group of four students, (A + B + D + F)/4 = (3k + 5k + 5k + 4k)/4 = 17k/4 = Integer
$\Rightarrow$ 17k = 4 × Integer
$\Rightarrow$ k is a multiple of 4.
For a group of five students, (A + B + D + E + F)/5 = (3k + 5k + 5k + 2k + 4k)/5 = 19k/5 = Integer
$\Rightarrow$ 19k = 5 × Integer
$\Rightarrow$ k is a multiple of 5.
From the above, we can conclude that k has to be a multiple of 2, 3, 4 and 5, so k has to be a multiple of 60.
Step 2:
The only value of k that satisfies all the conditions is k = 120. (Because if k = 60, then A < 200 and if k = 180, then B > 800)
So A = 360; B = 600; D = 600; E = 240; and F = 480.
Now, we have B = 600 and from (4), 150 < B – C < 200.
From (1), A + B + C + D + E + F = 2700 (which is also a multiple of 60.)
So C also has to be a multiple of 60, the only value that C can take is 420.
Finally we have the amounts with each student.

Arko	Barkha	Chiku	Diksha	Esha	Farukh	Total
Rs.360	Rs.600	Rs.420	600	Rs.240	Rs.480	Rs.2,700

Required amount = 900 × $(1.1)^2$ = Rs.1,089.

Directions for questions 30 to 34: Answer the questions on the basis of the information given below.

At a Mathematics class the teacher conducts a role play of a Bank where the students get to learn about investment and banking. Six students - Arko, Barkha, Chiku, Diksha, Esha, and Farukh - are given notes such that the total value of all the money is Rs.2,700.
It is also known that:
(i) For every group of any number of students among the six, the average amount per student for that group is an integer and no student has less than Rs.200 or more than Rs.800.
(ii) Barkha has more money than Chiku and the difference between their amounts is more than Rs.150 and less than Rs.200.
(iii) The amount with Diksha is equal to the sum of the amounts with Arko and Esha.
(iv) The amounts with Arko, Barkha, Esha, and Farukh are in the ratio 3 : 5 : 2 : 4 respectively.

Q.33 [12047429]
Which of the following statements is/are **NOT TRUE?**
I. Barkha and Diksha have equal amounts.
II. Esha has half the amount that Farukh has.
III. Three of them have amounts more than Rs.500

1 ○ I only

2 ○ Both I & II

3 ○ III only

4 ○ All of them

✔

Solution:
Correct Answer : 3
Your Answer : 3

Answer key/Solution

Step 1:
Let the amount with each student be denoted by their initials.
$\Rightarrow A + B + C + D + E + F = 2700$ (1)
$\Rightarrow A : B : E : F = 3 : 5 : 2 : 4$ (2)
$\Rightarrow D = A + E$ (3)
$\Rightarrow 150 < B - C < 200$ (4)
$\Rightarrow 200 < A, B, C, D, E, F < 800$ (5)
From (2), we can say that the amounts with A, B, E, and F are 3k, 5k, 2k and 4k respectively.
Also, from (3), we can say that the amount with D = A + E = 3k + 2k = 5k.
From (1) and (3), (A + E)/2 = (3k + 2k)/2 = 5k/2 = Integer
$\Rightarrow 5k = 2 \times$ Integer
$\Rightarrow$ k is a multiple of 2.
For a group of three students, (B + D + F)/3 = (5k + 5k + 4k)/3 = 14k/3 = Integer
$\Rightarrow 14k = 3 \times$ Integer
$\Rightarrow$ k is a multiple of 3.
For a group of four students, (A + B + D + F)/4 = (3k + 5k + 5k + 4k)/4 = 17k/4 = Integer
$\Rightarrow 17k = 4 \times$ Integer
$\Rightarrow$ k is a multiple of 4.
For a group of five students, (A + B + D + E + F)/5 = (3k + 5k + 5k + 2k + 4k)/5 = 19k/5 = Integer
$\Rightarrow 19k = 5 \times$ Integer
$\Rightarrow$ k is a multiple of 5.
From the above, we can conclude that k has to be a multiple of 2, 3, 4 and 5, so k has to be a multiple of 60.
Step 2:
The only value of k that satisfies all the conditions is k = 120. (Because if k = 60, then A < 200 and if k = 180, then B > 800)
So A = 360; B = 600; D = 600; E = 240; and F = 480.
Now, we have B = 600 and from (4), 150 < B – C < 200.
From (1), A + B + C + D + E + F = 2700 (which is also a multiple of 60.)
So C also has to be a multiple of 60, the only value that C can take is 420.
Finally we have the amounts with each student.

Arko	Barkha	Chiku	Diksha	Esha	Farukh	Total
Rs.360	Rs.600	Rs.420	600	Rs.240	Rs.480	Rs.2,700

We can see that Barkha and Diksha have Rs.600 each, so statement I is true. Esha has Rs.240 and Farukh has Rs.480, so statement II is true whereas only Barkha and Diksha have amounts more than Rs.500, which means two of them have amounts more than Rs.500. Hence, statement III is not true.

Directions for questions 30 to 34: Answer the questions on the basis of the information given below.

At a Mathematics class the teacher conducts a role play of a Bank where the students get to learn about investment and banking. Six children - Arko, Barkha, Chiku, Diksha, Esha, and Farukh - are given notes such that the total value of all the money is Rs.2,700.
It is also known that:
(i) For every group of any number of students among the six, the average amount per student for that group is an integer and no student has less than Rs.200 or more than Rs.800.
(ii) Barkha has more money than Chiku and the difference between their amounts is more than Rs.150 and less than Rs.200.
(iii) The amount with Diksha is equal to the sum of the amounts with Arko and Esha.
(iv) The amounts with Arko, Barkha, Esha, and Farukh are in the ratio 3 : 5 : 2 : 4 respectively.

Q.34 [12047429]

If Arko, Barkha and Chiku invest their total amount at 11% per annum simple interest for a period of 'n' years, then at what rate of simple interest should Diksha, Esha and Farukh invest their total amount to get the same interest at the end of 'n' years?

1 ○ 10%

2 ○ 10.5%

3 ○ 11.5%

4 ○ 12%

✔

Solution:

Correct Answer : 3

Your Answer : 3

Answer key/Solution

Step 1:

Let the amount with each student be denoted by their initials.

$\Rightarrow A + B + C + D + E + F = 2700$ (1)

$\Rightarrow A : B : E : F = 3 : 5 : 2 : 4$ (2)

$\Rightarrow D = A + E$ (3)

$\Rightarrow 150 < B - C < 200$ (4)

$\Rightarrow 200 < A, B, C, D, E, F < 800$ (5)

From (2), we can say that the amounts with A, B, E, and F are 3k, 5k, 2k and 4k respectively.

Also, from (3), we can say that the amount with $D = A + E = 3k + 2k = 5k$.

From (1) and (3), $(A + E)/2 = (3k + 2k)/2 = 5k/2 = \text{Integer}$

$\Rightarrow 5k = 2 \times \text{Integer}$

$\Rightarrow$ k is a multiple of 2.

For a group of three students, $(B + D + F)/3 = (5k + 5k + 4k)/3 = 14k/3 = \text{Integer}$

$\Rightarrow 14k = 3 \times \text{Integer}$

$\Rightarrow$ k is a multiple of 3.

For a group of four students, $(A + B + D + F)/4 = (3k + 5k + 5k + 4k)/4 = 17k/4 = \text{Integer}$

$\Rightarrow 17k = 4 \times \text{Integer}$

$\Rightarrow$ k is a multiple of 4.

For a group of five students, $(A + B + D + E + F)/5 = (3k + 5k + 5k + 2k + 4k)/5 = 19k/5 = \text{Integer}$

$\Rightarrow 19k = 5 \times \text{Integer}$

$\Rightarrow$ k is a multiple of 5.

From the above, we can conclude that k has to be a multiple of 2, 3, 4 and 5, so k has to be a multiple of 60.

Step 2:

The only value of k that satisfies all the conditions is $k = 120$. (Because if $k = 60$, then $A < 200$ and if $k = 180$, then $B > 800$)

So A = 360; B = 600; D = 600; E = 240; and F = 480.

Now, we have B = 600 and from (4), $150 < B - C < 200$.

From (1), $A + B + C + D + E + F = 2700$ (which is also a multiple of 60.)

So C also has to be a multiple of 60, the only value that C can take is 420.

Finally we have the amounts with each student.

Arko	Barkha	Chiku	Diksha	Esha	Farukh	Total
Rs.360	Rs.600	Rs.420	600	Rs.240	Rs.480	Rs.2,700

Total amount with Arko, Barkha and Chiku = Rs.1,380

Total amount with Diksha, Esha and Farukh = Rs.1,320

Given, $[1380 \times 11/100 \times n] = [1320 \times r/100 \times n] \Rightarrow r = (138 \times 11)/132 = 11.5\%$.

Directions for questions 35 to 39: Answer the questions on the basis of the information given below.

In an athletics meet, 8 runners—Arun, Barun, Chandan, Dharam, Ezhil, Farhan, Govind, and Harman—participated in three races: 100 m, 200 m, and 400 m. No runner finished in the same position in any of the races. In each of the three races, all runners finished in distinct positions from 1 to 8. Position 1 is given to the runner who completed the race 1st, Position 2 is given to the runner who completed the race 2nd and so on. The following information is known about these races:
(i) In 100 m race, Chandan finished 3rd, and in 400 m race, he finished 2nd. In 100 m and 200 m races, Barun finished 1st and 2nd, respectively.
(ii) In 400 m race, Arun did not finish 4th, but Govind finished 7th in 200 m race. In 400 m race, Harman did not finish 4th, and Farhan did not finish 8th.
(iii) For Arun, the number of people who finished ahead of him in 100 m race is the same as the number of people who finished behind him in 200 m race.
(iv) In every race, Dharam, Ezhil, and Farhan finished in consecutive positions, with Dharam finishing first among them and Farhan finishing last.
(v) Across the three races, the sum of Dharam's positions is the same as the sum of Govind's positions.
(vi) Harman had his best finish in 400 m race, followed by 100 m race, and then 200 m race. Dharam had his best finish in 200 m race.

Q.35 [12047429]
Which runners finished first in the three races?

1 ○ Barun, Arun, Chandan

2 ○ Barun, Chandan, Dharam

3 ○ Barun. Chandan, Harman

4 ○ Barun, Arun, Harman

✔

Solution:

Correct Answer : 4

Your Answer : 4

Answer key/Solution

Step 1:

From conditions (i), (ii), and (iii), The sum of Arun's positions in 100 m race and 200 m race should be 9.

From condition (iv), positions 5 and 6 in 100 m race are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 2/4/7/8 in 100 m race.

Similarly, in 200 m race positions 4 and 5 are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 8/6/3/1 in 200 m race.

So Arun finishes in positions 8 and 1 in 100 m and 200 m respectively.

The information can be shown in the table below.

Runner	100 m	200 m	400 m
Arun	8	1	× 4
Barun	1	2	
Chandan	3		2
Dharam	4/5	3/4	3/4/5
Ezhil	5/6	4/5	4/5/6
Farhan	6/7	5/6	5/6/7 × 8
Govind		7	
Harman			× 4

Step 2:

Case 1: Dharam finishes 4th in 100 m race.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

The information can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	1/8
Barun	1	2	4
Chandan	3	6/8	2
Dharam	4	3	5
Ezhil	5	4	6
Farhan	6	5	7
Govind	2	7	3
Harman	7	8/6	8/1

So case 1 is not possible.

Case 2: Dharam finishes 5th in 100 m race.

From condition (vi), Dharam must finish 3rd in 200 m. Harman finished either 1st or 3rd in 400 m.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

From condition (vi), Harman must finish in positions 4 and 1 in 100 m and 400 m respectively.

Hence, the final table can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	7
Barun	1	2	8
Chandan	3	6/8	2
Dharam	5	3	4
Ezhil	6	4	5
Farhan	7	5	6
Govind	2	7	3
Harman	4	8/6	1

Hence, Case 2 is possible.

Barun, Arun, and Harman finished first in the three races.

In an athletics meet, 8 runners—Arun, Barun, Chandan, Dharam, Ezhil, Farhan, Govind, and Harman—participated in three races: 100 m, 200 m, and 400 m. No runner finished in the same position in any of the races. In each of the three races, all runners finished in distinct positions from 1 to 8. Position 1 is given to the runner who completed the race 1st, Position 2 is given to the runner who completed the race 2nd and so on. The following information is known about these races:
(i) In 100 m race, Chandan finished 3rd, and in 400 m race, he finished 2nd. In 100 m and 200 m races, Barun finished 1st and 2nd, respectively.
(ii) In 400 m race, Arun did not finish 4th, but Govind finished 7th in 200 m race. In 400 m race, Harman did not finish 4th, and Farhan did not finish 8th.
(iii) For Arun, the number of people who finished ahead of him in 100 m race is the same as the number of people who finished behind him in 200 m race.
(iv) In every race, Dharam, Ezhil, and Farhan finished in consecutive positions, with Dharam finishing first among them and Farhan finishing last.
(v) Across the three races, the sum of Dharam's positions is the same as the sum of Govind's positions.
(vi) Harman had his best finish in 400 m race, followed by 100 m race, and then 200 m race. Dharam had his best finish in 200 m race.

Q.36 [12047429]
What position did Farhan finish in 400 m race?

Solution:

Correct Answer : 6

Your Answer : 6

Answer key/Solution

Step 1:

From conditions (i), (ii), and (iii), The sum of Arun's positions in 100 m race and 200 m race should be 9.

From condition (iv), positions 5 and 6 in 100 m race are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 2/4/7/8 in 100 m race.

Similarly, in 200 m race positions 4 and 5 are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 8/6/3/1 in 200 m race.

So Arun finishes in positions 8 and 1 in 100 m and 200 m respectively.

The information can be shown in the table below.

Runner	100 m	200 m	400 m
Arun	8	1	× 4
Barun	1	2	
Chandan	3		2
Dharam	4/5	3/4	3/4/5
Ezhil	5/6	4/5	4/5/6
Farhan	6/7	5/6	5/6/7 × 8
Govind		7	
Harman			× 4

Step 2:

Case 1: Dharam finishes 4th in 100 m race.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

The information can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	1/8
Barun	1	2	4
Chandan	3	6/8	2
Dharam	4	3	5
Ezhil	5	4	6
Farhan	6	5	7
Govind	2	7	3
Harman	7	8/6	8/1

So case 1 is not possible.

Case 2: Dharam finishes 5th in 100 m race.

From condition (vi), Dharam must finish 3rd in 200 m. Harman finished either 1st or 3rd in 400 m.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

From condition (vi), Harman must finish in positions 4 and 1 in 100 m and 400 m respectively.

Hence, the final table can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	7
Barun	1	2	8
Chandan	3	6/8	2
Dharam	5	3	4
Ezhil	6	4	5
Farhan	7	5	6
Govind	2	7	3
Harman	4	8/6	1

Hence, Case 2 is possible.

Farhan finished in position 6 in 400 m race.

(vi) Harman had his best finish in 400 m race, followed by 100 m race, and then 200 m race. Dharam had his best finish in 200 m race.

Q.37 [12047429]
Which of the following statements is/are TRUE?
I. The first three positions for all races can be uniquely determined.
II. Exactly 3 runners never have a top 3 finish.

1 ○ I only

2 ○ II only

3 ○ Both I & II

4 ○ Neither I nor II

✔

Solution:

Correct Answer : 1

Your Answer : 1

Answer key/Solution

Step 1:

From conditions (i), (ii), and (iii), The sum of Arun's positions in 100 m race and 200 m race should be 9.

From condition (iv), positions 5 and 6 in 100 m race are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 2/4/7/8 in 100 m race.

Similarly, in 200 m race positions 4 and 5 are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 8/6/3/1 in 200 m race.

So Arun finishes in positions 8 and 1 in 100 m and 200 m respectively.

The information can be shown in the table below.

Runner	100 m	200 m	400 m
Arun	8	1	× 4
Barun	1	2	
Chandan	3		2
Dharam	4/5	3/4	3/4/5
Ezhil	5/6	4/5	4/5/6
Farhan	6/7	5/6	5/6/7 × 8
Govind		7	
Harman			× 4

Step 2:

Case 1: Dharam finishes 4th in 100 m race.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

The information can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	1/8
Barun	1	2	4
Chandan	3	6/8	2
Dharam	4	3	5
Ezhil	5	4	6
Farhan	6	5	7
Govind	2	7	3
Harman	7	8/6	8/1

So case 1 is not possible.

Case 2: Dharam finishes 5th in 100 m race.

From condition (vi), Dharam must finish 3rd in 200 m. Harman finished either 1st or 3rd in 400 m.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

From condition (vi), Harman must finish in positions 4 and 1 in 100 m and 400 m respectively.

Hence, the final table can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	7
Barun	1	2	8
Chandan	3	6/8	2
Dharam	5	3	4
Ezhil	6	4	5
Farhan	7	5	6
Govind	2	7	3
Harman	4	8/6	1

Hence, Case 2 is possible.

Only statement I is TRUE.

4 ○ Govind

✔

Solution:

Correct Answer : 3

Your Answer : 3

Answer key/Solution

Step 1:

From conditions (i), (ii), and (iii), The sum of Arun's positions in 100 m race and 200 m race should be 9.

From condition (iv), positions 5 and 6 in 100 m race are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 2/4/7/8 in 100 m race.

Similarly, in 200 m race positions 4 and 5 are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 8/6/3/1 in 200 m race.

So Arun finishes in positions 8 and 1 in 100 m and 200 m respectively.

The information can be shown in the table below.

Runner	100 m	200 m	400 m
Arun	8	1	× 4
Barun	1	2	
Chandan	3		2
Dharam	4/5	3/4	3/4/5
Ezhil	5/6	4/5	4/5/6
Farhan	6/7	5/6	5/6/7 × 8
Govind		7	
Harman			× 4

Step 2:

Case 1: Dharam finishes 4th in 100 m race.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

The information can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	1/8
Barun	1	2	4
Chandan	3	6/8	2
Dharam	4	3	5
Ezhil	5	4	6
Farhan	6	5	7
Govind	2	7	3
Harman	7	8/6	8/1

So case 1 is not possible.

Case 2: Dharam finishes 5th in 100 m race.

From condition (vi), Dharam must finish 3rd in 200 m. Harman finished either 1st or 3rd in 400 m.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

From condition (vi), Harman must finish in positions 4 and 1 in 100 m and 400 m respectively.

Hence, the final table can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	7
Barun	1	2	8
Chandan	3	6/8	2
Dharam	5	3	4
Ezhil	6	4	5
Farhan	7	5	6
Govind	2	7	3
Harman	4	8/6	1

Hence, Case 2 is possible.

Chandan can finish last in 200 m race.

Directions for questions 35 to 39: Answer the questions on the basis of the information given below.

In an athletics meet, 8 runners—Arun, Barun, Chandan, Dharam, Ezhil, Farhan, Govind, and Harman—participated in three races: 100 m, 200 m, and 400 m. No runner finished in the same position in any of the races. In each of the three races, all runners finished in distinct positions from 1 to 8. Position 1 is given to the runner who completed the race 1st, Position 2 is given to the runner who completed the race 2nd and so on. The following information is known about these races:
(i) In 100 m race, Chandan finished 3rd, and in 400 m race, he finished 2nd. In 100 m and 200 m races, Barun finished 1st and 2nd, respectively.
(ii) In 400 m race, Arun did not finish 4th, but Govind finished 7th in 200 m race. In 400 m race, Harman did not finish 4th, and Farhan did not finish 8th.
(iii) For Arun, the number of people who finished ahead of him in 100 m race is the same as the number of people who finished behind him in 200 m race.
(iv) In every race, Dharam, Ezhil, and Farhan finished in consecutive positions, with Dharam finishing first among them and Farhan finishing last.
(v) Across the three races, the sum of Dharam's positions is the same as the sum of Govind's positions.
(vi) Harman had his best finish in 400 m race, followed by 100 m race, and then 200 m race. Dharam had his best finish in 200 m race.

Q.39 [12047429]
What can be the maximum sum of Harman's positions across all three races?

Solution:

Correct Answer : 13

Your Answer : 13

Answer key/Solution

Step 1:

From conditions (i), (ii), and (iii), The sum of Arun's positions in 100 m race and 200 m race should be 9.

From condition (iv), positions 5 and 6 in 100 m race are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 2/4/7/8 in 100 m race.

Similarly, in 200 m race positions 4 and 5 are bound to be among Dharam, Ezhil and Farhan. So Arun can finish in position 8/6/3/1 in 200 m race.

So Arun finishes in positions 8 and 1 in 100 m and 200 m respectively.

The information can be shown in the table below.

Runner	100 m	200 m	400 m
Arun	8	1	× 4
Barun	1	2	
Chandan	3		2
Dharam	4/5	3/4	3/4/5
Ezhil	5/6	4/5	4/5/6
Farhan	6/7	5/6	5/6/7 × 8
Govind		7	
Harman			× 4

Step 2:

Case 1: Dharam finishes 4th in 100 m race.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

The information can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	1/8
Barun	1	2	4
Chandan	3	6/8	2
Dharam	4	3	5
Ezhil	5	4	6
Farhan	6	5	7
Govind	2	7	3
Harman	7	8/6	8/1

So case 1 is not possible.

Case 2: Dharam finishes 5th in 100 m race.

From condition (vi), Dharam must finish 3rd in 200 m. Harman finished either 1st or 3rd in 400 m.

From condition (v), Sum of Dharam's position is 12. So the sum of Govind's position will be 12. So Govind must finish in positions 2 and 3 in 100 m and 400 m respectively.

From condition (vi), Harman must finish in positions 4 and 1 in 100 m and 400 m respectively.

Hence, the final table can be shown below.

Runner	100 m	200 m	400 m
Arun	8	1	7
Barun	1	2	8
Chandan	3	6/8	2
Dharam	5	3	4
Ezhil	6	4	5
Farhan	7	5	6
Govind	2	7	3
Harman	4	8/6	1

Hence, Case 2 is possible.

The maximum sum of Harman's positions across all three races = 4 + 8 + 1 = 13.

Directions for questions 40 to 44: Answer the questions on the basis of the information given below.

In a school, eight students of a class wrote exactly three tests - Test 1, Test 2, and Test 3. The eight students were ranked in each of the three tests from 1 to 8 such that, in every test, among any two students, the student with the higher marks received the numerically lower rank. Further, no student received the same marks in any two tests. For each student, the marks received by him in Test 3 was neither the highest nor the lowest among the three tests.
Exactly five students sent their Test 3 for re-evaluation and their marks either got increased or decreased. Due to which the ranks of eight students for Test 3 saw few changes maintaining previously stated conditions.
The table given below shows the marks obtained by the students in Test 1 and Test 2, the original ranks in Test 3, and the revised ranks in Test 3.

	Aman	Bheem	Dev	Eshan	Fiza	Hema	Gunjan	Jasbir
Marks in Test 1	85	86	79	70	73	69	78	75
Marks in Test 2	92	79	88	75	66	74	84	72
Original ranks in Test 3	2	3	1	7	6	8	4	5
Revised ranks in Test 3	2	4	1	5	7	8	3	6

Q.40 [12047429]
As per original ranks, what was the absolute difference between the sum of scores in 3 tests obtained by highest and lowest scorer?

✖

Solution:

Correct Answer : 52

Your Answer : 48

Answer key/Solution

Step 1:

Since marks in Test 3 were neither the highest nor the lowest among the three tests and no student obtained same marks in any two tests, therefore, each student will obtain marks in Test 3 such that those marks lie between the marks in other two tests - Test 1 and Test 2.

For example: Before re-evaluation, Dev can score marks 80 to 87 both inclusive and similarly, Aman can score marks 86 to 91 both inclusive.

But Dev must score more marks than Aman which is possible only is Dev score 87 and Aman scores 86.

As per original ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Bheem	86	79	80 to 85	
4	Gunjan	78	84	79 to 83	
5	Jasbir	75	72	73 and 74	
6	Fiza	73	66	72	211
7	Eshan	70	75	71	216
8	Hema	69	74	70	213

Step 2:

As per revised ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Gunjan	78	84	81 or 82 or 83	
4	Bheem	86	79	80 or 81 or 82	
5	Eshan	70	75	74	219
6	Jasbir	75	72	73	220
7	Fiza	73	66	71 or 72	
8	Hema	69	74	70 or 71	

Clearly, Dev and Aman score remained same after re-evaluation. Also, one out of Fiza and Hema must not have sent for re-evaluation, which implies Gunjan, Bheem, Eshan, and Jasbir sent their Test 3 for re-evaluation. And hence, their marks changed for sure.

As per original ranks, the absolute difference between the total score of 3 tests obtained by highest and lowest scorer = 263 – 211 = 52.

In a school, eight students of a class wrote exactly three tests - Test 1, Test 2, and Test 3. The eight students were ranked in each of the three tests from 1 to 8 such that, in every test, among any two students, the student with the higher marks received the numerically lower rank. Further, no student received the same marks in any two tests. For each student, the marks received by him in Test 3 was neither the highest nor the lowest among the three tests.
Exactly five students sent their Test 3 for re-evaluation and their marks either got increased or decreased. Due to which the ranks of eight students for Test 3 saw few changes maintaining previously stated conditions.
The table given below shows the marks obtained by the students in Test 1 and Test 2, the original ranks in Test 3, and the revised ranks in Test 3.

	Aman	Bheem	Dev	Eshan	Fiza	Hema	Gunjan	Jasbir
Marks in Test 1	85	86	79	70	73	69	78	75
Marks in Test 2	92	79	88	75	66	74	84	72
Original ranks in Test 3	2	3	1	7	6	8	4	5
Revised ranks in Test 3	2	4	1	5	7	8	3	6

Q.41 [12047429]
As per the original ranks, what is the absolute difference between the maximum and minimum possible score of the eight students combined in Test 3?

✖

Solution:

Correct Answer : 10

Your Answer : 20

Answer key/Solution

Step 1:

Since marks in Test 3 were neither the highest nor the lowest among the three tests and no student obtained same marks in any two tests, therefore, each student will obtain marks in Test 3 such that those marks lie between the marks in other two tests - Test 1 and Test 2.

For example: Before re-evaluation, Dev can score marks 80 to 87 both inclusive and similarly, Aman can score marks 86 to 91 both inclusive.

But Dev must score more marks than Aman which is possible only is Dev score 87 and Aman scores 86.

As per original ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Bheem	86	79	80 to 85	
4	Gunjan	78	84	79 to 83	
5	Jasbir	75	72	73 and 74	
6	Fiza	73	66	72	211
7	Eshan	70	75	71	216
8	Hema	69	74	70	213

Step 2:

As per revised ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Gunjan	78	84	81 or 82 or 83	
4	Bheem	86	79	80 or 81 or 82	
5	Eshan	70	75	74	219
6	Jasbir	75	72	73	220
7	Fiza	73	66	71 or 72	
8	Hema	69	74	70 or 71	

Clearly, Dev and Aman score remained same after re-evaluation. Also, one out of Fiza and Hema must not have sent for re-evaluation, which implies Gunjan, Bheem, Eshan, and Jasbir sent their Test 3 for re-evaluation. And hence, their marks changed for sure.

As per the original ranks, the absolute difference between the maximum and minimum possible score of the eight students combined in Test 3 = 85 + 83 + 74 – 80 – 79 – 73 = 10.

The table given below shows the marks obtained by the students in Test 1 and Test 2, the original ranks in Test 3, and the revised ranks in Test 3.

	Aman	Bheem	Dev	Eshan	Fiza	Hema	Gunjan	Jasbir
Marks in Test 1	85	86	79	70	73	69	78	75
Marks in Test 2	92	79	88	75	66	74	84	72
Original ranks in Test 3	2	3	1	7	6	8	4	5
Revised ranks in Test 3	2	4	1	5	7	8	3	6

Q.42 [12047429]
Which of the following can be the student who didn't send the Test 3 for re-evaluation?

1 ○ Gunjan

2 ○ Bheem

3 ○ Fiza

4 ○ Eshan

Solution:

Correct Answer : 3

Answer key/Solution

Step 1:

Since marks in Test 3 were neither the highest nor the lowest among the three tests and no student obtained same marks in any two tests, therefore, each student will obtain marks in Test 3 such that those marks lie between the marks in other two tests - Test 1 and Test 2.

For example: Before re-evaluation, Dev can score marks 80 to 87 both inclusive and similarly, Aman can score marks 86 to 91 both inclusive.

But Dev must score more marks than Aman which is possible only is Dev score 87 and Aman scores 86.

As per original ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Bheem	86	79	80 to 85	
4	Gunjan	78	84	79 to 83	
5	Jasbir	75	72	73 and 74	
6	Fiza	73	66	72	211
7	Eshan	70	75	71	216
8	Hema	69	74	70	213

Step 2:

As per revised ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Gunjan	78	84	81 or 82 or 83	
4	Bheem	86	79	80 or 81 or 82	
5	Eshan	70	75	74	219
6	Jasbir	75	72	73	220
7	Fiza	73	66	71 or 72	
8	Hema	69	74	70 or 71	

Clearly, Dev and Aman score remained same after re-evaluation. Also, one out of Fiza and Hema must not have sent for re-evaluation, which implies Gunjan, Bheem, Eshan, and Jasbir sent their Test 3 for re-evaluation. And hence, their marks changed for sure.

Fiza can be the student who didn't send the Test 3 for re-evaluation.

Directions for questions 40 to 44: Answer the questions on the basis of the information given below.

In a school, eight students of a class wrote exactly three tests - Test 1, Test 2, and Test 3. The eight students were ranked in each of the three tests from 1 to 8 such that, in every test, among any two students, the student with the higher marks received the numerically lower rank. Further, no student received the same marks in any two tests. For each student, the marks received by him in Test 3 was neither the highest nor the lowest among the three tests.
Exactly five students sent their Test 3 for re-evaluation and their marks either got increased or decreased. Due to which the ranks of eight students for Test 3 saw few changes maintaining previously stated conditions.
The table given below shows the marks obtained by the students in Test 1 and Test 2, the original ranks in Test 3, and the revised ranks in Test 3.

	Aman	Bheem	Dev	Eshan	Fiza	Hema	Gunjan	Jasbir
Marks in Test 1	85	86	79	70	73	69	78	75
Marks in Test 2	92	79	88	75	66	74	84	72
Original ranks in Test 3	2	3	1	7	6	8	4	5
Revised ranks in Test 3	2	4	1	5	7	8	3	6

Q.43 [12047429]
After re-evaluation, maximum how many students had the increase in their marks?

1 ○ 2

2 ○ 3

3 ○ 4

4 ○ 5

Solution:

Correct Answer : 3

Answer key/Solution

Step 1:

Since marks in Test 3 were neither the highest nor the lowest among the three tests and no student obtained same marks in any two tests, therefore, each student will obtain marks in Test 3 such that those marks lie between the marks in other two tests - Test 1 and Test 2.

For example: Before re-evaluation, Dev can score marks 80 to 87 both inclusive and similarly, Aman can score marks 86 to 91 both inclusive.

But Dev must score more marks than Aman which is possible only is Dev score 87 and Aman scores 86.

As per original ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Bheem	86	79	80 to 85	
4	Gunjan	78	84	79 to 83	
5	Jasbir	75	72	73 and 74	
6	Fiza	73	66	72	211
7	Eshan	70	75	71	216
8	Hema	69	74	70	213

Step 2:

As per revised ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Gunjan	78	84	81 or 82 or 83	
4	Bheem	86	79	80 or 81 or 82	
5	Eshan	70	75	74	219
6	Jasbir	75	72	73	220
7	Fiza	73	66	71 or 72	
8	Hema	69	74	70 or 71	

Clearly, Dev and Aman score remained same after re-evaluation. Also, one out of Fiza and Hema must not have sent for re-evaluation, which implies Gunjan, Bheem, Eshan, and Jasbir sent their Test 3 for re-evaluation. And hence, their marks changed for sure.

After re-evaluation, maximum of four students can have the increase in their marks.

In a school, eight students of a class wrote exactly three tests - Test 1, Test 2, and Test 3. The eight students were ranked in each of the three tests from 1 to 8 such that, in every test, among any two students, the student with the higher marks received the numerically lower rank. Further, no student received the same marks in any two tests. For each student, the marks received by him in Test 3 was neither the highest nor the lowest among the three tests.
Exactly five students sent their Test 3 for re-evaluation and their marks either got increased or decreased. Due to which the ranks of eight students for Test 3 saw few changes maintaining previously stated conditions.
The table given below shows the marks obtained by the students in Test 1 and Test 2, the original ranks in Test 3, and the revised ranks in Test 3.

	Aman	Bheem	Dev	Eshan	Fiza	Hema	Gunjan	Jasbir
Marks in Test 1	85	86	79	70	73	69	78	75
Marks in Test 2	92	79	88	75	66	74	84	72
Original ranks in Test 3	2	3	1	7	6	8	4	5
Revised ranks in Test 3	2	4	1	5	7	8	3	6

Q.44 [12047429]
After re-evaluation, what can be maximum increase or decrease in a student's marks in Test 3?

Solution:
Correct Answer : 5
Your Answer : 20

Answer key/Solution

Step 1:
Since marks in Test 3 were neither the highest nor the lowest among the three tests and no student obtained same marks in any two tests, therefore, each student will obtain marks in Test 3 such that those marks lie between the marks in other two tests - Test 1 and Test 2.
For example: Before re-evaluation, Dev can score marks 80 to 87 both inclusive and similarly, Aman can score marks 86 to 91 both inclusive.
But Dev must score more marks than Aman which is possible only is Dev score 87 and Aman scores 86.

As per original ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Bheem	86	79	80 to 85	
4	Gunjan	78	84	79 to 83	
5	Jasbir	75	72	73 and 74	
6	Fiza	73	66	72	211
7	Eshan	70	75	71	216
8	Hema	69	74	70	213

Step 2:
As per revised ranks:

Rank in Test 3	Students	Test 1 marks	Test 2 marks	Test 3 marks	Total marks
1	Dev	79	88	87	254
2	Aman	85	92	86	263
3	Gunjan	78	84	81 or 82 or 83	
4	Bheem	86	79	80 or 81 or 82	
5	Eshan	70	75	74	219
6	Jasbir	75	72	73	220
7	Fiza	73	66	71 or 72	
8	Hema	69	74	70 or 71	

Clearly, Dev and Aman score remained same after re-evaluation. Also, one out of Fiza and Hema must not have sent for re-evaluation, which implies Gunjan, Bheem, Eshan, and Jasbir sent their Test 3 for re-evaluation. And hence, their marks changed for sure.

After re-evaluation, the maximum increase or decrease in a student's marks in Test 3 can be 5. If Bheem scores 85 marks originally and after re-evaluation it changes to 80.

Q.45 [12047429]

If 'a' and 'b' are positive numbers such that $\log_a(5a^3 + 24) = 6$ and $\frac{4}{\log_a b} - 1 = 0$, then what is the value of (a + b)?

✔

Solution:
Correct Answer : 18
Your Answer : 18

Answer key/Solution

$\log_a(5a^3 + 24) = 6 \Rightarrow 5a^3 + 24 = a^6$
Let $a^3 = k$.
Then, $5k + 24 = k^2$
$\Rightarrow k^2 - 5k - 24 = 0$
$\Rightarrow (k + 3)(k - 8) = 0$
$\Rightarrow k = -3$ or $k = 8$
Since k is always positive, so $k = 8$.
So $a^3 = 8 \Rightarrow a = 2$

$$\frac{4}{\log_a b} - 1 = 0 \Rightarrow 4 \log_b a = 1 \Rightarrow \log_b a^4 = \log_b b$$

So $b = a^4 = 2^4 = 16$
Hence, $(a + b) = 2 + 16 = 18$.

Q.46 [12047429]

If $\sqrt{3x+1}+\sqrt{3x-1}=\sqrt{2}(1+\sqrt{2})$, then the value of $\sqrt{5x+7}$ is:

1 ○ $3\sqrt{2}$

2 ○ $2\sqrt{3}$

3 ○ $4\sqrt{3}$

4 ○ $\sqrt{17}$

✔

Answer key/Solution

Solution:
Correct Answer : 2
Your Answer : 2

$\sqrt{3x+1}+\sqrt{3x-1}=\sqrt{2}(1+\sqrt{2})$

$\Rightarrow 3x+\sqrt{9x^2-1}=(3+2\sqrt{2})$

$\Rightarrow \sqrt{9x^2-1}=(3+2\sqrt{2})-3x$

$\Rightarrow 9x^2-1=(3+2\sqrt{2})^2+9x^2-2\times 3x(3+2\sqrt{2})$

$\Rightarrow (3+2\sqrt{2})[6x-(3+2\sqrt{2})]=1$

$\Rightarrow 6x=\frac{1}{3+2\sqrt{2}}+(3+2\sqrt{2})$

$\Rightarrow 6x=\frac{1+9+8+12\sqrt{2}}{3+2\sqrt{2}}=\frac{6(3+2\sqrt{2})}{3+2\sqrt{2}} \Rightarrow x=1$

Hence, $\sqrt{5x+7}=\sqrt{5\times 1+7}=2\sqrt{3}$.

Short Cut:
$\sqrt{(3x + 1)} + \sqrt{(3x – 1)} = \sqrt{2}(1 + \sqrt{2})$
$\Rightarrow \sqrt{(3x + 1)} + \sqrt{(3x – 1)} = \sqrt{2} + \sqrt{4}$
So 3x + 1 = 4 and 3x – 1 = 2
$\Rightarrow$ x = 1
Hence, $\sqrt{(5x + 7)} = 2\sqrt{3}$.

Q.47 [12047429]
The sum of the roots of the equation $9(x – 1)^2 – 18|x – 1| + 5 = 0$, is

1 ○ 0

2 ○ 4/3

3 ○ 8/3

4 ○ 4

Solution:
Correct Answer : 4
Your Answer : 4

Answer key/Solution

The given equation is $9(x-1)^2 - 18|x-1| + 5 = 0$.
Let $t = |x-1|$.
Then, $9t^2 - 18t + 5 = 0$
$\Rightarrow (3t-1)(3t-5) = 0 \Rightarrow t = 1/3$ or $t = 5/3$
$\Rightarrow |x-1| = 1/3$ or $|x-1| = 5/3$
$\Rightarrow x - 1 = \pm 1/3$ or $x - 1 = \pm 5/3$
So roots of the equation are 4/3, 2/3, 8/3, – 2/3.
Hence, the sum of roots = 4/3 + 2/3 + 8/3 – 2/3 = 4.

Q.48 [12047429]

The times taken individually by Amit, Beena, and Chahal to complete a piece of work are in arithmetic progression in this order. Chahal takes 1.5 times as long as Amit to finish the same work. Amit works for 6 days, Beena works for 10 days, and Chahal needs 3 days to complete the remaining work. What is the difference between the number of days Amit alone and Beena alone will take to complete the work?

1 ○ 3

2 ○ 4

3 ○ 6

4 ○ 8

✔

Solution:
Correct Answer : 2
Your Answer : 2

Answer key/Solution

Chahal takes 1.5 times as much as Amit to finish the same work. Since the times taken individually by Amit, Beena, and Chahal to complete the work are in AP.
So Beena should take (1 + 1.5)/2 = 1.25 times the time as Amit to complete the same work.
So time taken by Amit, Beena, and Chahal will be in the ratio 1 : 1.25 : 1.5 or 4 : 5 : 6.
6 days work of Amit = 9 days work of Chahal
10 days work of Beena = 12 days work of Chahal
So total time take by Chahal alone to complete the work = 9 + 12 + 3 = 24 days
So Amit alone and Beena alone complete the work in 16 days and 20 days, respectively.
Hence, required difference = 20 – 16 = 4 days.

Q.49 [12047429]

Let A_n and B_n be two sequences such that $A_n = 11 + 8(n-1)$ and $B_n = 13 + 9(n-1)$ for all natural numbers $n \leq 500$. Then, find the largest integer common to both these sequences.

Solution:

Correct Answer : 3955

Answer key/Solution

$A_n = 11 + 8(n - 1) \Rightarrow A_n = 3 + 8n$
$B_m = 13 + 9(m - 1) \Rightarrow B_m = 4 + 9m$
For some m, n, let $3 + 8n = 4 + 9m$
$\Rightarrow 8n - 9m = 1$
n = 8 and m = 7 satisfy it.
$A_8 = 67$, $B_7 = 67$
The common difference of the two series are 8 and 9.
LCM(8, 9) = 72
The common terms of the series = 67 + 72k
$A_{500} = 11 + 8(500 - 1) = 4003$
$B_{500} = 13 + 9(500 - 1) = 4504$
(4003 – 67)/72 = 54.66...
Hence, the largest integer common to both sequences = 67 + 72 × 54 = 3955.

Q.50 [12047429]

Let ΔABC be an equilateral triangle. D, E, F are points on the sides such that BD : DC = CE : EA = AF : FB = 2 : 1. If the area of ΔABC is 315 sq. cm, then what is the area (in sq. cm) of the triangle bounded by AD, BE, and CF?

1 ○ 15

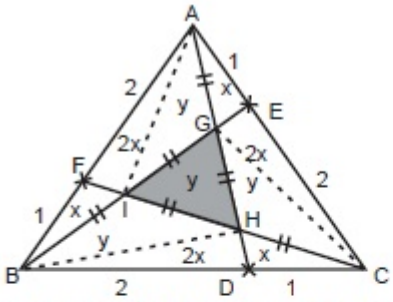

2 ○ 30

3 ○ 45

4 ○ 60

Solution:
Correct Answer : 3
Your Answer : 4

Answer key/Solution

Let area of ΔCDH be x. Then, area of ΔBDH will be 2x.
Similarly, we can write the area of other triangles.

Also, $\frac{\text{Area of } \Delta ABD}{\text{Area of } \Delta ADC} = \frac{2}{1}$

$\Rightarrow \frac{2x + y + x + 2x + y + y}{x + y + 2x + x} = \frac{2}{1}$

$\Rightarrow 5x + 3y = 8x + 2y$
$\Rightarrow y = 3x$
Area of ΔABC = 315 $\Rightarrow$ 21x = 315
Hence, the area of ΔGHI = 3x = 45 sq. cm.

Bookmark FeedBack

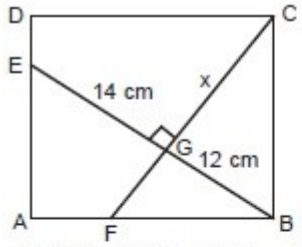

Q.51 [12047429]

In square ABCD, points E and F lie on AD and AB, respectively. BE and CF intersect at right angles at G, such that BG = 12 cm and EG = 14 cm. If GC > FG, what is the area (in sq. cm) of the square?

✖

Solution:
Correct Answer : 468
Your Answer : 400

Answer key/Solution

$\angle FCB + \angle CFB = 90°$ and $\angle GBF + \angle GFB = 90°$
So $\angle GBF = \angle FCB$
AB = BC
$\angle DAB = \angle CBF = 90°$
So ΔAEB is congruent to ΔBFC.
So BE = CF = 12 + 14 = 26 cm
So FG = (26 – x) cm
In ΔCBF, $FG \times GC = BG^2$
$\Rightarrow (26 - x) \times x = 12^2$
$\Rightarrow x^2 - 26x + 144 = 0$
$\Rightarrow (x - 18)(x - 8) = 0$
So x = 18 cm (Since GC > FG)
Hence, area of square ABCD = $BC^2 = 18^2 + 12^2 = 468$ sq. cm.

Q.52 [12047429]

Ravi and Sonu bought a variety of fresh apples and oranges from the market. Spending the same amount of money as Ravi, Sonu purchased three times as many oranges and 12 less apples than Ravi. If the cost of one apple is Rs. 6 more than the cost of one orange, what is the minimum possible number of oranges bought by Ravi and Sonu together?

1 ○ 20

2 ○ 24

3 ○ 28

4 ○ 32

✖

Solution:
Correct Answer : 3
Your Answer : 2

Answer key/Solution

Let the cost of one orange be Rs.p.
Then, the cost of one apple will be Rs.(p + 6).

	Oranges	Apples
Ravi	x	y
Sonu	3x	(y – 12)

According to the question,
$px + (p + 6)y = 3px + (p + 6)(y – 12)$
$\Rightarrow px + py + 6y = 3px + py + 6y – 12p – 72$
$\Rightarrow 2px = 12p + 72$
$\Rightarrow p(x – 6) = 36$
The minimum value of x has to be 7.
The total number of oranges they bought together = $x + 3x = 4x$
Hence, required minimum number of oranges = $4 \times 7 = 28$.

Q.53 [12047429]

Rajesh borrowed 80 books from library A and some books from library B. Some books are of Hindi language while some are of other regional languages. Number of books in regional languages are atmost 200 and equal to 1.25 times the books in library B. If atmost 70% of books from library A were in regional languages, then maximum how many books of Hindi language were from Library B?

✖

Solution:
Correct Answer : 44
Your Answer : 75

Answer key/Solution

Let the number of books in library B be 4x.
Then, the total number of books in regional languages will be 5x.
To determine the maximum number of Hindi books in library B, assume there are no regional language books in library B.
The maximum number of regional language books in library A can be 80 × 0.7 = 56.
So $5x \leq 56 \Rightarrow x = 11$
So 4x = 4 × 11 = 44 and the number of regional languages books in library A will be 5x i.e., 55.
Hence, the maximum number of Hindi books in library B is 44.

Q.54 [12047429]

The product of the two-digit number a4 and the three-digit number 3bc is 7656. What is the average of a, b and c? (a, b, c are digits)

1 ○ 3

2 ○ 4

3 ○ 5

4 ○ 6

✔

Solution:
Correct Answer : 2
Your Answer : 2

Answer key/Solution

After factorization of 7656 we get:
$7656 = 2^3 \times 3 \times 11 \times 29$
x4 can be 14, 24, 34, 44, 54, 64, 74, 84, 94 of which only 24, and 44 are only possible.
If x4 = 24, then remaining factors will give the product 319.
If x4 = 44, then remaining factors will give the product 174. (Invalid)
Hence, required average = (2 + 1 + 9)/3 = 4.

Q.55 [12047429]

The mean of a set of 11 positive integers is 77. Their median is 80 while the only mode is 85. If the mean of smallest five integers of this set is 69, then what can be the maximum possible integer in the set?

1 ○ 87

2 ○ 88

3 ○ 89

4 ○ 90

✔

Solution:
Correct Answer : 3
Your Answer : 3

Answer key/Solution

Sum of all 11 integers = 847
Let the integers be arranged in increasing order: a1, a2, a3, a4, a5, a6, a7, a8, a9, a10, a11.
a1 + a2 + a3 + a4 + a5 = 69 × 5 = 345 and a6 will be 80.
Atleast two integers will be 85 since it is the mode.
To maximise the highest integer let mode appears exactly twice. And all other 9 integers are distinct.
Then let a7 = 81 and a8 = 82 and a9 = a10 = 85.
Hence, a11 = 847 – (345 + 80 + 81 + 82 + 85 + 85) = 89.

Q.56 [12047429]

Let M and m be the maximum and minimum value of $n^3 - 3n$ such that $n^4 - 10n^2 + 9 \leq 0$. What is the value of M – m?

Solution:

Correct Answer : 36

Answer key/Solution

$n^4 - 10n^2 + 9 \leq 0$
or, $(n^2 - 1)(n^2 - 9) \leq 0$
or, $1 \leq n^2 \leq 9$ or, $1 \leq |n| \leq 3$ or, $n \in [-3, -1] \cup [1, 3]$.
So $M = 3^3 - 3 \times 3 = 18$ and $m = (-3)^3 - 3(-3) = -18$.
Hence, M – m = 36.

Q.57 [12047429]

Aman and Babli run around a circular track of length L metres. Aman and Babli run at constant, but different speeds. They start from diametrically opposite points such that Aman runs clockwise around the track and Babli runs counterclockwise. They meet for the first time after Aman has run 100 metres and for the second time after Babli runs 150 metres past their first meeting point. What is the value of L?

1 ○ 300

2 ○ 350

3 ○ 360

4 ○ 420

✖

Solution:

Correct Answer : 2

Your Answer : 1

Answer key/Solution

Let Aman's and Babli's speed be a m/s and b m/s. When they meet for the first time they cover L/2 m together and since Aman covers 100 m, Babli must have covered (L/2 – 100)m.
a/b = 100/(L/2 – 100) ... (i)
For the second meeting, they cover L m together and since Babli covers 150 m, Aman must have covered (L – 150)m.
a/b = (L – 150) /150 ...(ii)
From (i) and (ii), we get,
100/(L/2 – 100) = (L – 150) /150
⇒ (L – 150) (L/2 – 100) = 100 × 150
⇒ (L – 150) (L – 200) = 30000
⇒ L^2 – 350L + 30000 = 30000 ⇒ L(L – 350) = 0
Hence, L = 350 m.

Q.58 [12047429]

Rahul steals 4 mangoes for every dozen whenever he purchases them from a farmer and his customers steal 2 mangoes for every dozen whenever they purchase the mangoes from Rahul. What is the profit or loss percentage of Rahul, if he marks a dozen at 25% above the price that is offered by the farmer and offers a discount of 9%?

1 ○ 16% profit

2 ○ 9.04% loss

3 ○ No profit, no loss

4 ○ 30% profit

Solution:
Correct Answer : 4

Answer key/Solution

Let the cost price of a mango be Re.1
Selling price after both Rahul and his customer have stolen and discount is offered on MP
$= 16/12 \times 12/14 \times 1.25 \times 0.91 = Rs.1.30$
Hence, profit percentage $= (1.30 - 1)/1 \times 100 = 30\%$.

Q.59 [12047429]

Captain Arjun Dev borrowed Rs.10 lakh from a nationalized bank at 6% per annum simple interest for 10 years. The bank came up with a scheme for armed forces personnel 't' years later, thereby decreasing the rate of interest by 2 percentage points. In this way Arjun Dev had to pay a total amount of Rs.14.8 lakh. If he had received the same discount 't – 2' years after he borrowed the amount, by how much would his interest (in Rs.) have decreased?

1 ○ 45,000

2 ○ 40,000

3 ○ 44,000

4 ○ 48,000

Solution:
Correct Answer : 2

Answer key/Solution

Interest paid by Captain Arjun Dev = Rs.4,80,000.
Let the number of years for which he paid 6% be t.
$\Rightarrow 1000000 \times 0.06 \times t + 1000000 \times 0.04 \times (10 - t) = 480000$
$\Rightarrow 20000t = 80000 \Rightarrow t = 4$ years
If he had received the discount two years earlier:
$1000000 \times 0.06 \times 2 + 1000000 \times 0.04 \times 8 = 440000$
Hence, required difference $= 480000 - 440000 = Rs.40,000$.

Q.60 [12047429]

Let f(p, q) be a real-valued function such that f(p + 3q, 3p – 4q) = 13p, for all real numbers p and q. The value of p for which f(p/4, p/3) = 10, is:

Solution:

Correct Answer : 5

Answer key/Solution

Let a = p + 3q and b = 3p – 4q.
Then, 4a + 3b = 4p + 12q + 9p – 12q = 13p
Therefore, f(a, b) = 4a + 3b
Hence, f(p/4, p/3) = 2p = 10 ⇒ p = 5.

Q.61 [12047429]

A vessel contains a mixture of milk and water in the respective ratio of 5 : 1. 18 liters of mixture was taken out and replaced with the same quantity of milk so that the resultant ratio between the quantities of milk and water in the mixture becomes 7 : 1 respectively. If 28 liters of the mixture is again taken out from the vessel, what is the quantity (in liters) of water that should be added to make the quantity of milk 70% in the mixture?

1 ○ 9

2 ○ 10

3 ○ 11

4 ○ 12

Solution:

Correct Answer : 3

Answer key/Solution

Let the initial volume of milk and water in the vessel be 5x and x respectively.
⇒ (5x – 15 + 18) : (x – 3) = 7 : 1 ⇒ x = 12 liters
Thus the total volume of the mixture in the vessel = 6 × 12 = 72 liters
After removing 28 liters from the final mixture having milk and water in the ratio 7 : 1 we get the remaining quantity of milk as 44 × 7/8 = 38.5 liters.
Let us add y liters of water.
⇒ 38.5/(44 + y) × 100 = 70 ⇒ y = 11 liters.

Q.62 [12047429]

A trapezium ABCD is inscribed in a circle of radius 17 cm. Sides AB and CD are parallel, and the perpendicular distance between them is 23 cm. If AB = 16 cm, then what is the area (in sq. cm) of the trapezium ABCD?

1 ○ 529

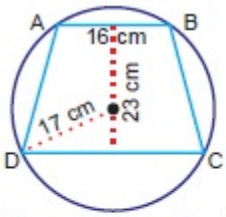

2 ○ 523

3 ○ 519

4 ○ 509

Solution:
Correct Answer : 1

Answer key/Solution

The perpendicular from the center to the chord AB bisects it.
Using Pythagoras theorem: the distance from the center to AB = $\sqrt{(17^2 - 8^2)}$ = 15 cm
So the distance of chord CD from the center = 23 – 15 = 8 cm
So CD/2 = $\sqrt{(17^2 - 8^2)}$ = 15 cm
So CD = 30 cm
Hence, area of the trapezium ABCD = 1/2 × 23 × (30 + 16) = 529 sq. cm.

Q.63 [12047429]

Some rowers in a boat row up a stream flowing at 5 km/h. At their destination, one-third of the rowers were too tired to row on the return journey. Despite this, the time taken on the return leg was the same. If each rower contributed 1 km/h of speed, what was the length (in km) of the stream given that the entire journey took 4 hours?

1 ○ 25

2 ○ 35

3 ○ 50

4 ○ 60

Solution:
Correct Answer : 3

Answer key/Solution

Since the time taken was the same. So the speed must have been the same. And the number of rowers in the two legs must be in the ratio 3 : 2.
So 3x – 5 = 2x + 5 ⇒ x = 10
So speed on one leg = 3 × 10 – 5 = 25 km/h
Hence, 2 × Length of stream = 25 × 4 = 100
⇒ Length of stream = 50 km.

Q.64 [12047429]

The roots of $x^2 + 11x + 3 = 0$ are m and n and the roots of $x^2 + Bx - C = 0$ are m + 1 and n + 1. What is the value of C?

✔

Solution:
Correct Answer : 7
Your Answer : 7

Answer key/Solution

The roots of $x^2 + 11x + 3 = 0$ are $\frac{-11 \pm \sqrt{121-12}}{2} = \frac{-11 \pm \sqrt{109}}{2}$.

The roots of $x^2 + Bx - C = 0$ are m + 1 and n + 1, which implies roots are $\frac{-9 \pm \sqrt{109}}{2}$.

This means $B = 9$ and $81 + 4C = 109 \Rightarrow 4C = 109 - 81 = 28 \Rightarrow C = 7$.

Bookmark FeedBack

Q.65 [12047429]

In a school, the ratio of students in three sections A, B and C is 17 : 13 : 15. Due to the Inter-School competition, some new students were added to sections A and C. As a result, the ratio of the students of sections A, B and C becomes 14 : 10 : 23. What is the minimum possible number of students that were there in the three sections initially?

✔

Solution:
Correct Answer : 450
Your Answer : 450

Answer key/Solution

Let the number of students in three sections A, B and C be 17x, 13x and 15x respectively and now the new number of students be 14y, 10y, and 23y respectively.
Since students of section B did not have new addition for competition, therefore, 13x = 10y or, x/y = 10/13.
In order to minimize the number of students in the three sections initially, the value of x must be taken as least as possible. Therefore, let x = 10.
Hence, initially there were (17 + 13 + 15) × 10 = 450 students.

Bookmark FeedBack

Q.66 [12047429]

Let 'x' and 'y' be real numbers such that $|x - y| + 3x - y = 70$, and $|y - x| + 3y + x = 50$. Then, the possible value of $(x + 2y)/5$ is:

1 ○ 3

2 ○ 6

3 ○ 12

4 ○ 18

Solution:

Correct Answer : 2

Answer key/Solution

Case 1: When $x > y$

$|x - y| + 3x - y = 70$

$\Rightarrow x - y + 3x - y = 70$

$\Rightarrow 2x - y = 35$ ... (i)

$|y - x| + 3y + x = 50$

$\Rightarrow - y + x + 3y + x = 50$

$\Rightarrow x + y = 25$ ... (ii)

From (i) and (ii), $x = 20, y = 5$

So $(x + 2y) = (20 + 10)/5 = 6$

Case 2: When $x < y$

$|x - y| + 3x - y = 70$

$\Rightarrow -x + y + 3x - y = 70$

$\Rightarrow 2x = 70 \Rightarrow x = 35$ ... (iii)

$|y - x| + 3y + x = 50$

$\Rightarrow y - x + 3y + x = 50$

$\Rightarrow 4y = 50 \Rightarrow y = 25/2$ ... (iv)

From (iii) and (iv), $x = 35$ and $y = 25/2$ (Which is not possible.)

Hence, required possible value is 6.

Bookmark FeedBack
